# 1 Introduction

Pervasive analytics for SAP Business One, version for SAP HANA enables you to access and visualize your data in a customized way.

The application provides three analytic tools that can accelerate your decision making process, offering immediate and fact-based answers to business questions.

- Key Performance Indicators (KPIs): With queries and views, you can easily design KPIs and related actions that are customized to your specific needs. You can view the KPI and use its actions in the advanced dashboard or the cockpit.
- Pervasive dashboard: With queries and views, you can easily design pervasive dashboards and related actions that are customized to your specific needs. You can view the pervasive dashboard and use its actions in the advanced dashboard or the cockpit.
- Advanced dashboard: You can design advanced dashboards to contain various widgets. You can view the advanced dashboard in pages and retrieve specific data using filters.

**Welcome to Pervasive Analytics Designer**

Pervasive analytics for SAP Business One, version for SAP HANA enables you to access and visualize your data in a customized way. Dashboards, KPIs, and advanced dashboards can accelerate your decision making process, offering immediate and fact-based answers to business questions.

## 2 Working with Key Performance Indicators (KPIs)

A KPI helps you evaluate the status of business in an easy-to-view way. The pervasive analytics designer enables you to design KPIs of your own based on the following:

- Queries in SAP Business One, version for SAP HANA
- Calculation views in the SAP HANA database

### Note

- For a newly created company in SAP Business One 9.2, version for SAP HANA, the compatibility mode is *Off*, and thus only calculation views are available.
- SAP Business One 9.2, version for SAP HANA companies upgraded from versions that have the compatibility mode feature, will have the same settings for the compatibility mode as the previous versions.
- The compatibility mode is *On* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are initializedThus, they will have the previously provided analytic and attribute views.
- The compatibility mode is *Off* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are not initializedThus, only calculation views are available.

For more information about the compatibility mode, look for the [SAP Business One Administrator's Guide, version for SAP HANA](#) on [SAP Help Portal](#).

In the pervasive analytics designer, you can also set up a link between your KPI and an advanced dashboard. Thus the linked advanced dashboard will appear when you click the KPI in the Fiori-style cockpit or in an advanced dashboard.

### Note

For more information about the semantic layer data sources, look for the [How to Work with Semantic Layers](#) guide on [SAP Help Portal](#).

---

## 2.1 Designing KPIs Using the Pervasive Analytics Designer

### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the *Working with App Framework for SAP Business One, version for SAP HANA* guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To grant authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user for whom you want to set authorizations, and under *Analytics*, in *Pervasive Analytics Designer* select *Full Authorization*.

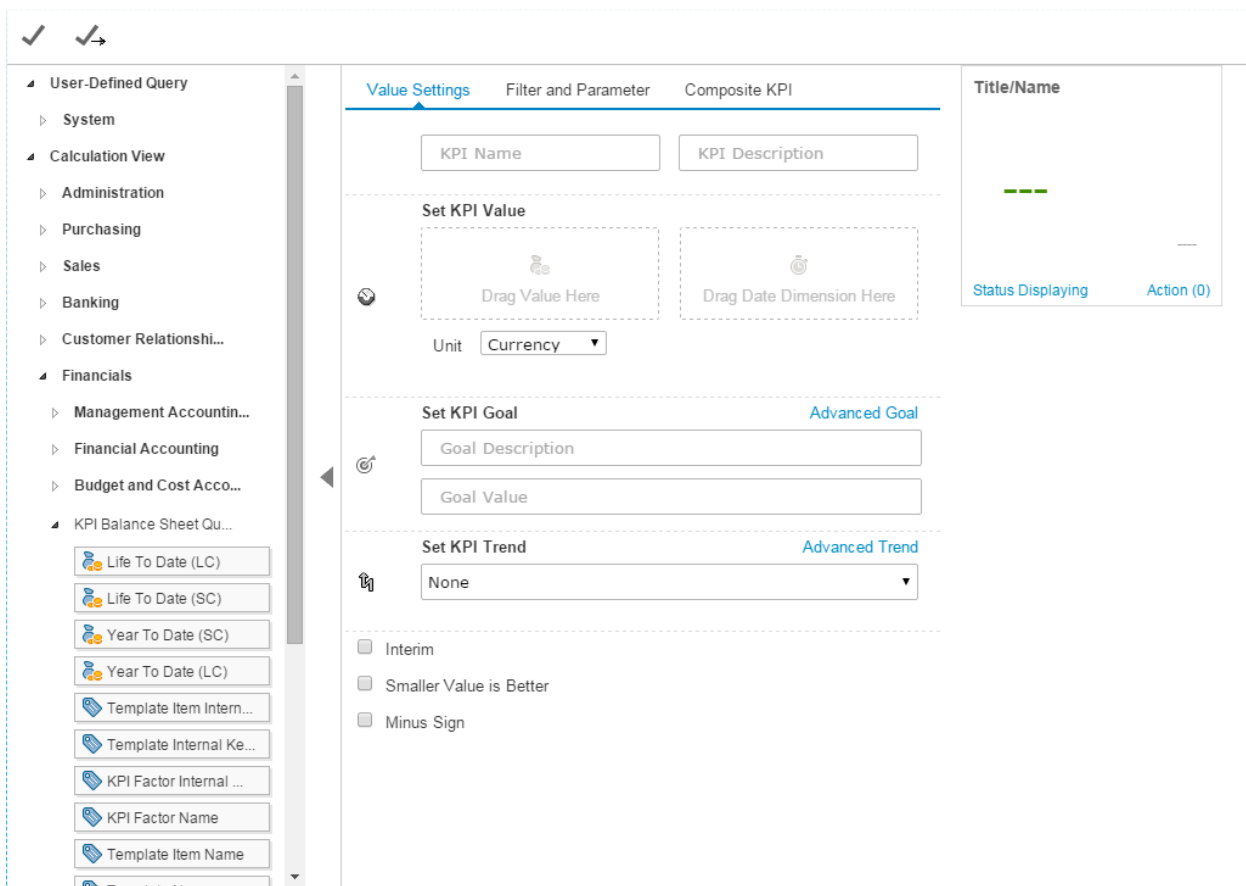

### Procedure

1. In the SAP Business One, version for SAP HANA toolbar, choose  (*Pervasive Analytics*). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose *Tools* → *Pervasive Analytics*. The *Pervasive Analytics* window appears.

#### Note

Only users with authorizations for the pervasive analytics designer can access this window.

- On the left side of the *Pervasive Analytics* window, choose *New KPI*.

The KPI designer appears. The data source section on the left displays the following:

- All the system and customized *SELECT* queries.
- All the deployed calculation views in the SAP HANA database.

### **i** Note

- For a newly created company in SAP Business One 9.2, version for SAP HANA, the compatibility mode is *Off*, and thus only calculation views are available.
- SAP Business One 9.2, version for SAP HANA companies upgraded from versions that have the compatibility mode feature, will have the same settings for the compatibility mode as the previous versions.
- The compatibility mode is *On* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are initialized

Thus, they will have the previously provided analytic and attribute views.
- The compatibility mode is *Off* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are not initialized

Thus, only calculation views are available.

For more information about the compatibility mode, look for the *SAP Business One Administrator's Guide, version for SAP HANA* on [SAP Help Portal](#).

3. On the left side of the KPI designer, in the data source section, select the query or view based on which you want to design a KPI.

Its measures, dimensions, and parameters appear.

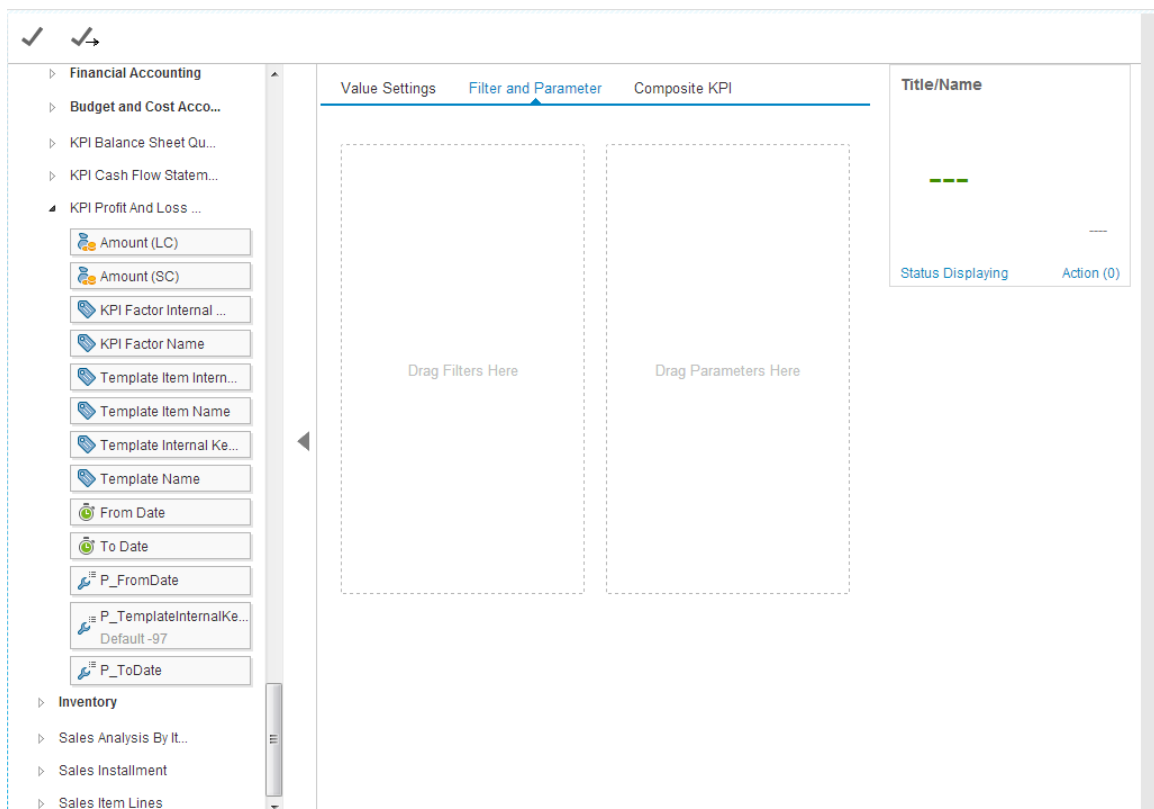

- o Measures appear with the  label.
- o String type dimensions appear with the  label.
- o Date type dimensions appear with the  label.
- o Parameters appear with the  label.

4. On the *Value Settings* tab, specify various settings. For more information, see [Value Settings Tab](#).

5. [Optional] On the *Filter and Parameter* tab, specify filters and parameters. For more information, see [Filter and Parameter Tab](#).

### Note

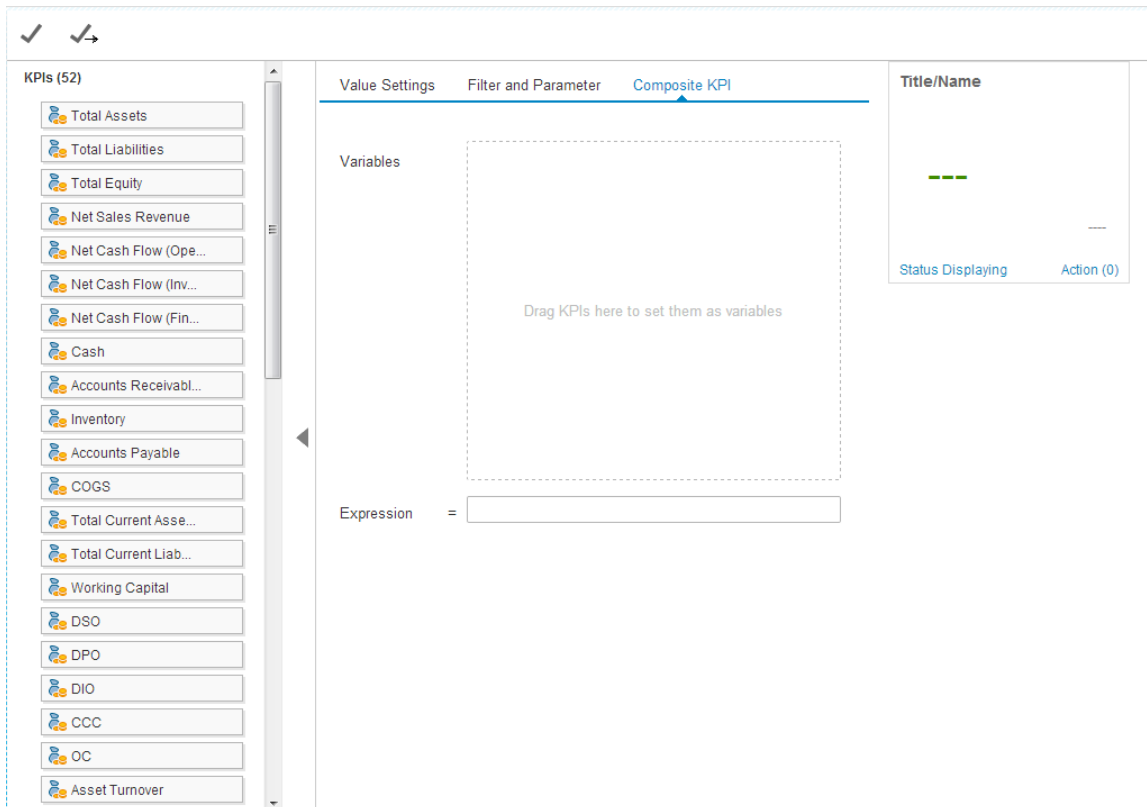

If you selected a measure from the *KPI Balance Sheet Query*, *KPI Cash Flow Statement Query*, or *KPI Profit And Loss Query* view, you must add *P\_TemplateInternalKey* as a parameter, and add the dimension *KPI Factor Internal Key* or *KPI Factor Name* as a filter. For more information, see [Filter and Parameter Tab](#) and [Using Financial KPI Factors](#).

6. [Optional] If you are designing a KPI that consists of other KPIs, then on the *Composite KPI* tab, specify the variables. For more information, see [Composite KPI Tab](#).

**i** Note

A KPI value is taken either from the KPI value box on the *Value Settings* tab or from the expression result on the *Composite KPI* tab. Therefore, you cannot both specify a measure in the KPI value box on the *Value Settings* tab and design a composite KPI on the *Composite KPI* tab.

7. [Optional] In the preview area, choose *Status Displaying* and define the display settings. For more information, see [Status Displaying Section](#).

The screenshot displays the 'Composite KPI' configuration window. The main area is divided into 'Value Settings', 'Filter and Parameter', and 'Composite KPI' tabs. The 'Composite KPI' tab is active, showing a 'Variables' section with a dashed box containing the text 'Drag KPIs here to set them as variables' and an 'Expression' field with an equals sign and a text input box. A 'Title/Name' preview box shows a green bar chart with the text 'Status Displaying' and 'Action (0)'. The 'Status Displaying' settings panel on the right includes a 'Separator Type' section with radio buttons for 'Specific Value' and 'Ratio of KPI to Goal' (selected). Below this is a vertical bar chart with a green top section, a blue middle section, and a red bottom section. The chart has a scale from  $+\infty$  at the top to  $-\infty$  at the bottom. Two white arrows point to the chart at '110.00%' and '90.00%', each with a trash icon to its right. At the bottom of the panel are 'OK' and 'Cancel' buttons.

8. [Optional] In the preview area, choose *Action* and add actions to the KPI. For more information, see [Adding Actions to KPIs](#).

9. To save the KPI, in the upper left corner, choose ✓ (Save); to save the KPI as a new one, if you opened an existing KPI, in the upper left corner, choose ✓→ (Save As).

## 2.1.1 Value Settings Tab

### Procedure

On the *Value Settings* tab, perform the following:

1. Specify the KPI name and description.

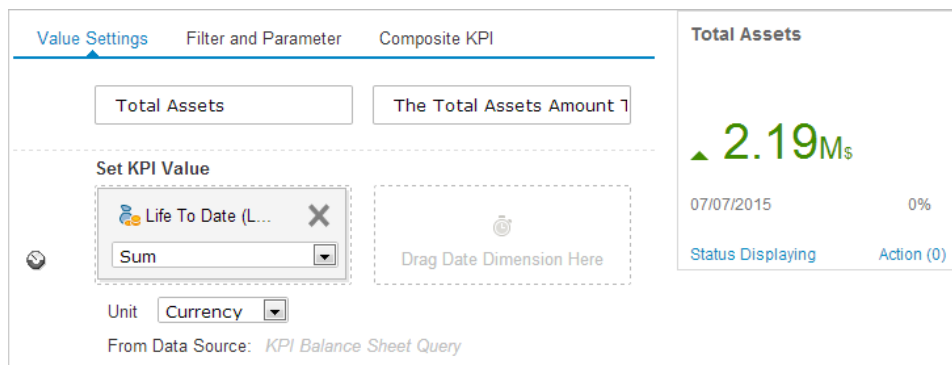

The KPI name appears in the upper left corner of the preview area. The KPI description appears as a tooltip when your mouse cursor hovers over the KPI name.

2. In the data source section, in a query or view, select a measure and drag it to the value box of the *Set KPI Value* section.

The preview area is refreshed and the sum or average of the KPI value appears.

The name of the selected query or view appears in the *From Data Source* field at the bottom of the *Set KPI Value* section.

3. [Optional] In the data source section, in the same query or view, select a date dimension, and drag it to the date dimension box of the *Set KPI Value* section.

The preview area is refreshed and the KPI value is calculated according to the date range you specified.

4. [Optional] In the *Unit* dropdown list of the *Set KPI Value* section, select the unit that you want to display under the KPI value.

The preview area is refreshed and the selected unit appears beside the KPI value. If you customized the unit, you must enter no more than five characters.

5. In the *Set KPI Goal* section, perform the following to define a basic goal or an advanced goal.
  - o To define a basic goal, specify the name or description of the goal, and specify a number as the goal value.
  - o To define an advanced goal, specify the name or description of the goal. If you selected a measure from a view as your KPI value, select a measure from any query as your goal value; if you selected a measure from a query as your KPI value, select a measure from any query in the same query category as your goal value.

The first value of the measure will be the goal value.

**i** Note

For the advanced goal value, you cannot select a measure from queries with parameters.

An arrow may appear before the KPI value in the preview area, based on the KPI value and goal value:

- o If the KPI value is greater than the goal value, an up arrow appears.

- o If the KPI value is equal to the goal value, nothing appears.

The screenshot shows the 'Value Settings' configuration for a KPI. The 'Set KPI Value' section is configured with 'Life To Date (L...)' and 'Sum' aggregation, 'Currency' unit, and 'KPI Balance Sheet Query' data source. The 'Set KPI Goal' section has a goal value of '2190900.05'. The preview area on the right shows 'Total Assets' with a value of '2.19M\$' and a goal of '\$2.19 M', with no arrow displayed.

- o If the KPI value is smaller than the goal value, a down arrow appears.

The screenshot shows the 'Value Settings' configuration for a KPI. The 'Set KPI Value' section is configured with 'Life To Date (L...)' and 'Sum' aggregation, 'Currency' unit, and 'KPI Balance Sheet Query' data source. The 'Set KPI Goal' section has a goal value of '2190900.06'. The preview area on the right shows 'Total Assets' with a value of '2.19M\$' and a goal of '\$2.19 M', with a blue down arrow displayed.

The preview area is refreshed as follows:

- o The goal name and goal value appear in a tooltip when your mouse cursor hovers over the KPI value.
- o The appropriate arrow appears before the KPI value.
- o The color of the arrow and KPI value is updated. The color of the arrow and the KPI value are determined by the settings in the *Status Displaying* section and the status of the *Smaller Value Is Better* checkbox.

You can see the color change in the following screenshots when the settings in the *Status Displaying* section are the same and the status of the *Smaller Value is Better* checkbox is different.

**Value Settings** | Filter and Parameter | Composite KPI

## Note

If you have changed any default settings in the *Status Displaying* section since starting work on the KPI, the status change of the *Smaller Value Is Better* checkbox will **NOT** determine the color of the arrow and the KPI value. If you want to change the color of the KPI arrow and the KPI value, change the settings in the *Status Displaying* section.

- [Optional] In the *Set KPI Trend* section, perform the following to define a basic trend or an advanced trend.
  - To define a basic trend, select the trend type.

## Example

For the month-over-month basis, the trend value will be the compared percentage between the KPI value of this month and that of last month. For the month-over-same-month basis, the trend value will be the compared percentage between the KPI value of this month and that of the same month last year.

- For an advanced trend, if you selected a measure from a view as your KPI value, select a measure from any query as your trend value; if you selected a measure from a query as your KPI value, select a measure from any query in the same query category as your trend value.

The first value of the measure will be the trend value.

## Note

For the advanced trend value, you cannot select a measure from queries with parameters.

An arrow may appear before the trend value in the preview area based on the trend value:

## Note

When the denominator in the trend calculation is not a positive number, the following appears in the trend area.

- o If the trend value is greater than zero, an up arrow appears.

The screenshot shows the configuration and display of a KPI named 'Inbound Inventory Value'. The configuration panel on the left includes:

- Value Settings:** 'Inbound Inventory Value' and 'KPI Description'.
- Set KPI Value:** 'Inbound Amount' (Sum) and 'Posting Date' (This Day). Unit is 'Currency'.
- Set KPI Goal:** 'Advanced Goal' with fields for 'Goal Description' and 'Goal Value'.
- Set KPI Trend:** 'Advanced Trend' set to 'Day-Over-Day Basis'.

The display panel on the right shows the KPI value as 44K\$, with a green up arrow and a 10% increase from the previous date (07/07/2015). The status is 'Status Displaying' and there are 0 actions.

- o If the trend value is equal to zero, nothing appears.

This screenshot is identical to the one above, showing the configuration for 'Inbound Inventory Value'. However, the display panel on the right shows a value of 40K\$ with a green up arrow and a 0% change from the previous date (07/07/2015). The status remains 'Status Displaying' with 0 actions.

- o If the trend value is less than zero, a down arrow appears.

The preview area is refreshed as follows:

- o The trend name and trend value appear in a tooltip when your mouse cursor hovers over the KPI value.
- o The trend value appears in the lower right corner of the preview area.
- o The arrow appears before the trend value.
- o The color of the arrow is updated. The color of the arrow is determined by the status of the *Smaller Value Is Better* checkbox.

You can see the color change in the following screenshots when the status of the *Smaller Value Is Better* checkbox is different.

### Note

If you have changed any default settings in the *Status Displaying* section since starting work on the KPI, the status change of the *Smaller Value Is Better* checkbox will not immediately refresh the preview area. The color of the trend arrow will be refreshed the next time you open this KPI.

7. [Optional] To make this KPI unavailable for display in the cockpit, select the *Interim* checkbox. This means that the KPI will only be the component of other KPIs, and will not be available for display in the cockpit.
8. [Optional] Select the *Smaller Value Is Better* checkbox to indicate that the smaller the value than the goal value, the better the result, or that if the trend value is less than zero, the result is good. This checkbox determines the color settings in the *Status Displaying* section, thus affecting the following:
  - o Color of the arrow before the trend value.
  - o Color of the following:
    - o Arrow before the KPI value (if the KPI value is not equal to the goal value)
    - o KPI value

### Note

If you have changed any default settings in the *Status Displaying* section since starting work on the KPI, the following will happen:

- o The status change of the *Smaller Value Is Better* checkbox will not immediately refresh the color of the trend arrow. The color of the trend arrow will be refreshed the next time you open this KPI.
  - o The status change of the *Smaller Value Is Better* checkbox will **NOT** determine the color of the KPI arrow and the KPI value. If you want to change the color of the KPI arrow and the KPI value, change the settings in the *Status Displaying* section.
9. [Optional] Select the *Minus Sign* checkbox to add a minus sign in front of the KPI value. The status of this checkbox, together with the settings in the *Status Displaying* section, determines the color of the following:
    - o Arrow before the KPI value (if the KPI value is not equal to the goal value)
    - o KPI value

## 2.1.2 Filter and Parameter Tab

### Prerequisite

On the *Value Settings* tab, you have dragged a measure from a query or view to the value box of the *Set KPI Value* section.

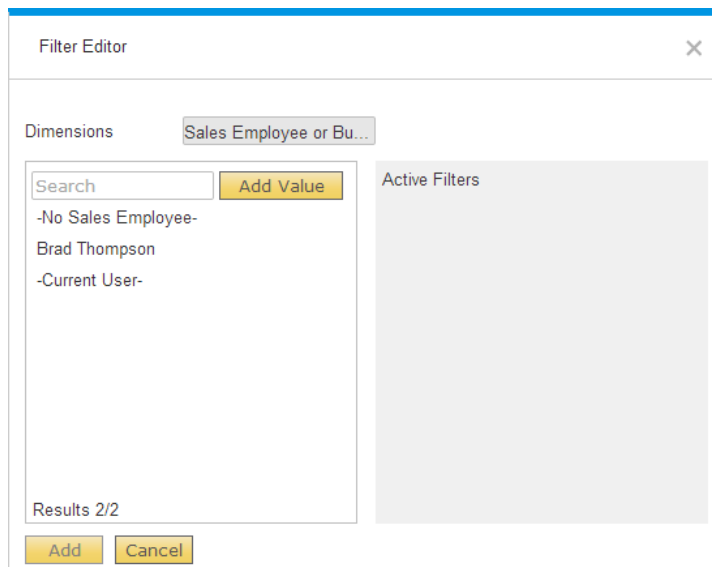

### Procedure

- For filters, perform the following:

### Note

Filters do not apply to the advanced goal or advanced trend.

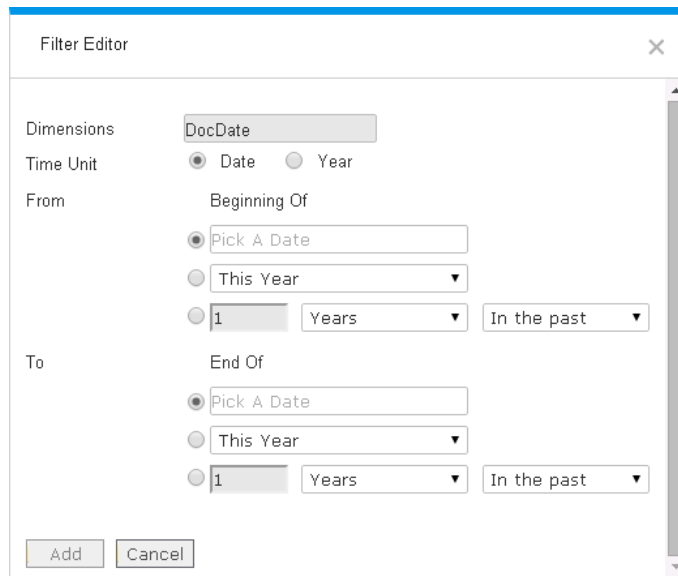

1. In the data source section, in the same query or view from which you dragged the KPI value, select a dimension and drag it to the filter box.  
The *Filter Editor* window appears.
2. In the *Filter Editor* window, perform the following based on the type of the dimension:
  - o For a string type dimension, select a filtering value, or enter a filtering value and choose the *Add Value* button.  
The filtering value is added to the *Active Filters* section.  
For string type dimensions, *-Current User-* appears as a filtering value. If you choose this value, the code of the logged-on user will be used as the filtering value.

### **i** Note

When the KPI value filtered by certain filtering values has records in the database, then such and only such filtering values appear in the list. If you want to use other filtering values, you need to enter them and choose the *Add Value* button.

- o For a date type dimension, define a time range.

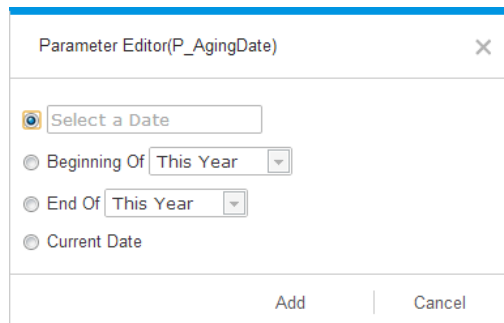

3. To save the filter settings, in the *Filter Editor* window, choose the *Add* button. The preview area is refreshed according to the added filters.

**i** Note

If you selected a measure from views *KPI Balance Sheet Query*, *KPI Cash Flow Statement Query*, or *KPI Profit And Loss Query* view, you must add *P\_TemplateInternalKey* as a parameter, and add the dimension *KPI Factor Internal Key* or *KPI Factor Name* as a filter. For more information, see [Using Financial KPI Factors](#).

- For parameters, perform the following:
  1. In the data source section, in the same query or view from which you dragged the KPI value, select a parameter and drag it to the parameter box. The *Parameter Editor* window appears.
  2. In the *Parameter Editor* window, perform the following based on the type of the parameter:
    - o For a date type parameter, specify a default date.

- For a number type parameter, specify a default number.

A screenshot of a 'Parameter Editor' dialog box titled 'Parameter Editor(P\_AgingBucketSize)'. It features a close button (X) in the top right corner. Below the title bar, there is a label 'Default Value' followed by an empty text input field. At the bottom of the dialog, there are two buttons: 'Add' and 'Cancel'.

- For a string type parameter, specify a default value.

A screenshot of a 'Parameter Editor' dialog box titled 'Parameter Editor(P\_BusinessPartnerType)'. It features a close button (X) in the top right corner. Below the title bar, there is a label 'Default Value' followed by an empty text input field. At the bottom of the dialog, there are two buttons: 'Add' and 'Cancel'.

3. To save the parameter settings, choose the *Add* button.  
The preview area is refreshed according to the added parameters.

**i** Note

Some parameters are labeled with a red rectangle. To get a meaningful KPI value, you must drag those parameters to the parameter box.

## 2.1.2.1 Using Financial KPI Factors

A financial KPI factor links a KPI and an item in the financial report templates. You define financial KPI factors in the *Financial KPI Factor - Setup* window. To open this window, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *Setup* → *Financials* → *Financial KPI Factors*.

The screenshot shows a window titled "Financial KPI Factors - Setup" with a table containing 17 rows. The columns are: #, Code, Name, Template Name, and Template Item. The table lists various financial items and their corresponding templates. At the bottom of the window, there are "OK" and "Cancel" buttons.

#	Code	Name	Template Name	Template Item
1	001	Cash	Predefined BS Template for KPI	Cash and Cash Equivalents
2	002	Inventory	Predefined BS Template for KPI	Inventory
3	003	Accounts Receivable	Predefined BS Template for KPI	Receivables
4	004	Fixed Assets	Predefined BS Template for KPI	Fixed Assets
5	005	Current Assets	Predefined BS Template for KPI	Current Assets
6	006	Total Assets	Predefined BS Template for KPI	Assets
7	007	Accounts Payable	Predefined BS Template for KPI	Accounts Payable
8	008	Current Liabilities	Predefined BS Template for KPI	Current Liabilities
9	009	Long Term Liabilities	Predefined BS Template for KPI	Long Term Liabilities
10	010	Total Liabilities	Predefined BS Template for KPI	Liabilities
11	011	Total Equity	Predefined BS Template for KPI	Equity
12	012	Net Sales Revenue	Predefined PL Template for KPI	Revenues
13	013	Gross Sales Revenue		
14	014	Sales Discounts		
15	015	COGS	Predefined PL Template for KPI	Cost of Sales
16	016	Gross Profit		
17	017	Operating Costs	Predefined PL Template for KPI	Expenses

SAP Business One, version for SAP HANA provides 28 predefined financial KPI factors.

In the *KPI Balance Sheet Query*, *KPI Cash Flow Statement Query*, and *KPI Profit And Loss Query* views, the measures that are defined as the KPI values do not retrieve data directly from the database. Only after you identify the financial report template in the KPI designer and set the dimension *KPI Factor Internal Key* or *KPI Factor Name* as a filter, does the KPI value retrieve data from the financial report template item that is linked to the financial KPI factor.

Using the financial KPI factors in KPIs consists of the following procedures:

1. Link a financial KPI factor to an item in the financial report template.
2. Identify the financial report template in the KPI designer.
3. Set the dimension *KPI Factor Internal Key* or *KPI Factor Name* as a filter.

### Prerequisite

Linked items of the financial report template contain values, and the values belong to the current year.

---

## Procedure

To link a financial KPI factor to an item in the financial report template, follow the procedure below:

1. From the SAP Business One, version for SAP HANA *Main Menu*, choose *Financials* → *Financial Report Templates*.

The *Financial Report Templates* window appears.

2. In the *Financial Report Templates* window, select a template from the *Balance Sheet*, *Profit and Loss*, or *Statement of Cash Flows* report.

The template appears on the right.

3. In the template, select an item whose data you want to use in the KPI.

- In the *Financial KPI Factors* section, in the *Factor* field, enter the factor code, or press **F12** to select a factor.

The screenshot shows the 'Financial Report Templates' window. On the left, the 'Report' is set to 'Balance Sheet' and the 'Template' is 'Predefined BS Template for'. Under 'G/L Account Details', the 'Account Name' is 'Current Liabilities' and the 'Factor' is '008'. The right pane displays a hierarchical list of account types: Assets (Current Assets, Fixed Assets, L/Term Assets), Liabilities (Current Liabilities, Long Term Liabilities), and Equity (Stockholders Equity, Surplus, Profit Period). 'Current Liabilities' is highlighted. At the bottom, there are buttons for 'Update', 'Cancel', 'Add Same-Level Acct', 'Add Child Account', and 'Generate Standard Chart of Accounts'.

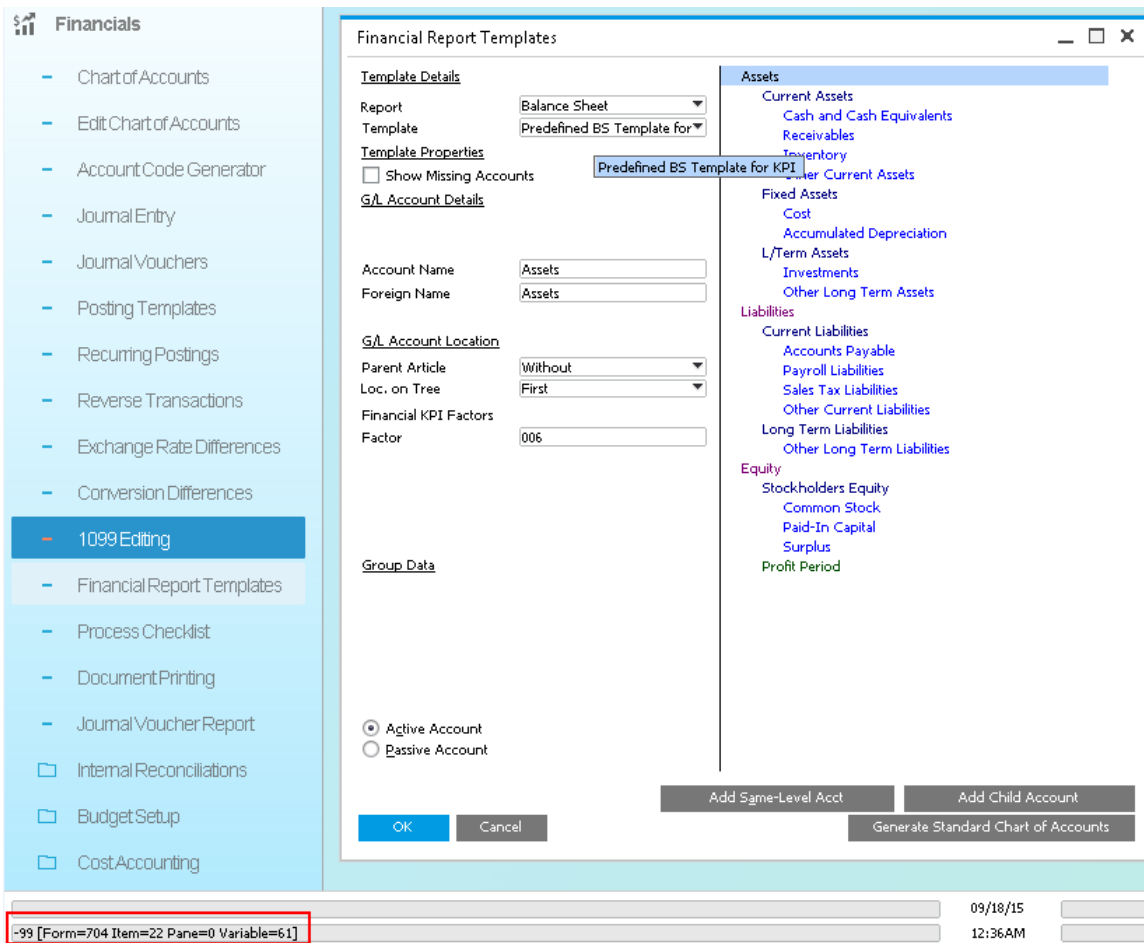

- To save the link, in the *Financial Report Templates* window, choose the *Update* button.

## Procedure

To identify the financial report template in the KPI designer, follow the procedure below:

- In the SAP Business One, version for SAP HANA menu bar, choose *View* → *System Information*.  
When you hover your mouse over fields in windows, you can view system information in the left-hand corner of the status bar.
- From the SAP Business One, version for SAP HANA *Main Menu*, choose *Financials* → *Financial Report Templates*. From the *Report* dropdown list, select the required financial report.
- From the *Template* dropdown list, select the template.

4. Hover your mouse over the template name.

The system information appears in the status bar, and the first number is the template code.

5. In the data source section of the KPI designer, in the same query or view from which you dragged the KPI value, select *P\_TemplateInternalKey*, and drag it to the parameter box.
6. In the *Parameter Editor* window, enter the template code that you got from the system information of the template.

7. To identify the financial report template in the KPI designer, choose the *Add* button.

## Procedure

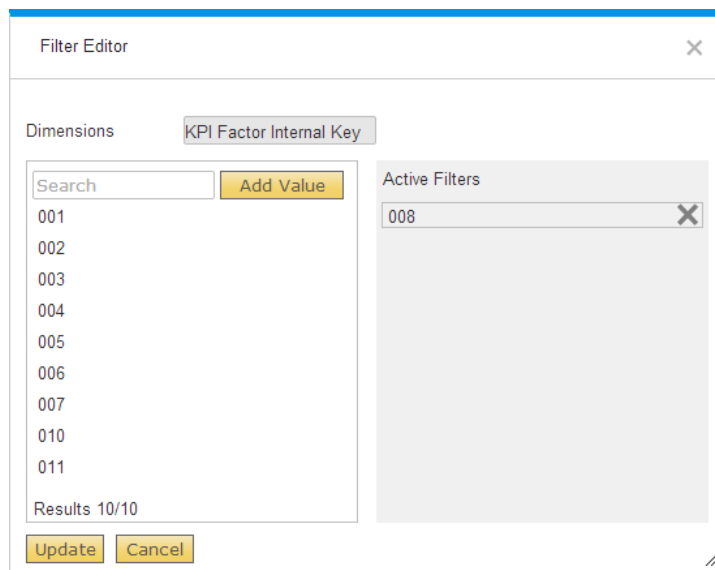

To set the dimension *KPI Factor Internal Key* or *KPI Factor Name* as a filter, follow the procedure below:

1. In the data source section, in the same query or view from which you dragged the KPI value, select *KPI Factor Internal Key* or *KPI Factor Name*, and drag it to the filter box.

The *Filter Editor* window appears, displaying all the financial KPI factors that contain values.

2. In the *Filter Editor* window, select the available financial KPI factor, or enter a financial KPI factor code (if you dragged the *KPI Factor Internal Key* dimension) or financial KPI factor name (if you dragged the *KPI Factor Name* dimension), and choose the *Add Value* button.

The financial KPI factor is added to the *Active Filters* section.

3. To save the filter settings, choose the *Add* button.

The preview area is refreshed and the KPI value is retrieved from the financial report template item.

## 2.1.3 Composite KPI Tab

The data source section of the *Composite KPI* tab displays all the KPIs in the database, including interim KPIs.

### Note

Nested composite KPI is not supported. Example of a nested composite KPI is as follows:

*Expression=K01+K02, K02=K03+04*. You can use the following instead: *Expression= K01+K03+K04*.

The following expressions are supported: "+" (plus sign), "-" (minus sign), "\*" (multiply sign), "/" (divide sign), "()" (bracket).

## Procedure

On the *Composite KPI* tab, perform the following:

1. From the KPI list section, drag a KPI to the variable box.

The dragged KPI is labeled as a variable.

2. In the *Expression* field, specify the expression using the variables.

The preview area is refreshed and the result of the calculated expression appears as the KPI value.

The screenshot shows the 'Composite KPI' configuration interface. It features three tabs: 'Value Settings', 'Filter and Parameter', and 'Composite KPI'. The 'Composite KPI' tab is selected. On the left, there is a 'Variables' section with a list of two variables: 'Inventory as K01' and 'COGS as K02', each with a close button. Below this is an 'Expression' field containing the formula 'K01/K02\*30'. On the right, a preview area shows a green downward arrow followed by '-1.46KDay'. Below the preview, it says 'Status Displaying' and 'Action (0)'.

---

## 2.1.4 Status Displaying Section

### Procedure

In the *Status Displaying* section, perform the following:

1. Select the separator type.
2. In the two value boxes, perform the following based on the separator type you selected:
  - If you selected *Specific Value*, enter specific values to act as the separators for different colors.
  - If you selected *Ratio of KPI to Goal*, enter numbers with percentage symbols to act as the separators for different colors.
3. In the three colored dropdown lists, select the colors to represent the three separated parts.
4. You can click the color bar to add a separator.
5. To delete the separator, choose  (*Delete*) beside the value box; to save the display settings, choose the *OK* button.

The preview area is refreshed. The color of the KPI and the arrow before the KPI value (if the KPI value is not equal to the goal value) is updated.

## 2.1.5 Adding Actions to KPIs

To access the action section of a KPI, in the lower right corner of the preview area, choose [Action](#). The action section displays the action that you have defined.

### Note

You can add only one action for one KPI.

## Procedure

To add actions to KPIs, follow the procedure below.

1. In the action section of a KPI, choose  ([Add a New Action](#)) beside [Actions To Be Triggered](#).

The edit window appears.

The screenshot shows a dialog box titled "Open Advanced Dashboard" with a close button (X) in the top right corner. Inside the dialog, there is a radio button selected next to a dashboard icon. To the right, there are two input fields: "Action Name" containing the text "Open Advanced Dashboard 1" and "Target Adv. Dashboard" which is a dropdown menu currently showing "(Select)". At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

2. You can add one type of action. For more information, see the following section.
3. To save the action, in the edit window, choose the [OK](#) button; to delete the action, in the action section, choose  ([Remove](#)) beside the action.

## 2.1.5.1 Action: Open Advanced Dashboard

In the Fiori-style cockpit or an advanced dashboard, for a KPI to which you have added this type of action, click the KPI to open the linked advanced dashboard.

### Note

Make sure you have authorizations for the advanced dashboard that you want to view. To set authorizations for advanced dashboards to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user to whom you want to grant the authorization, and in *Analytics* → *Content* → *Advanced Dashboard*, select *Full Authorization* for the advanced dashboards for which you want to grant authorization. Once you have authorizations for a specific advanced dashboard, you can view all the contents in it.

### Procedure

To add action type *Open Advanced Dashboard*, follow the procedure below:

1. In the edit window of actions, select the *Open Advanced Dashboard* radio button.
2. In the *Action Name* field, specify the action name.
3. In the *Target Adv. Dashboard* dropdown list, select the advanced dashboard that you want to open. You can link the KPI to only one advanced dashboard with one action, and you can add only one action to one KPI.
4. To save the action, choose the *OK* button.

## 2.1.5.2 Action: Open Dashboard (For the SAP Business One Sales App)

In the SAP Business One mobile apps, for a KPI to which you have added this type of action, tap the KPI to open the linked pervasive dashboard.

For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see [Predefined Advanced Dashboards](#).

For more information about the mobile apps, look for the guides *Working with SAP Business One Sales Mobile App* or *Working with SAP Business One Service Mobile App* on [SAP Help Portal](#).

### Note

This action takes effect only in the SAP Business One mobile apps.

### Procedure

To add the action type *Open Dashboard (For the SAP Business One Sales App)*, follow the procedure below:

1. In the edit window of actions, select the *Open Dashboard (For the SAP Business One Sales App)* radio button.
2. In the *Action Name* field, specify the action name.

3. In the *Target Dashboard* dropdown list, select the pervasive dashboard that you want to open. You can link the KPI to only one pervasive dashboard with one action, and you can add only one action to one KPI.
4. To save the action, choose the *OK* button.

## 2.2 Viewing KPIs in the Cockpit

In the cockpit, you can view predefined KPIs as well as the KPIs that are designed using the pervasive analytics designer.

### Prerequisites

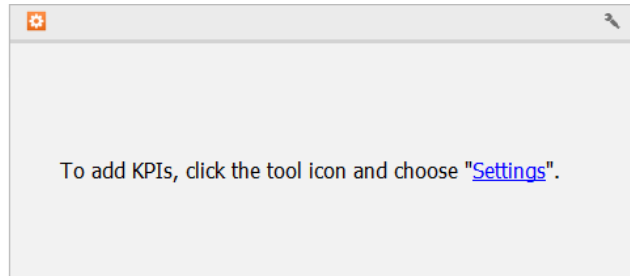

- Your system administrator or key user has done the following:
  - Enabled the cockpit at company level by selecting the *Cockpit* radio button on the *Cockpit* tab of the *General Settings* window. To open this window, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *General Settings*.
  - Assigned the user authorizations for *Cockpit & Widget*. To grant the *Cockpit & Widget* authorizations to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user to whom you want to grant the authorizations, and in *Cockpit & Widget*, select *Full Authorization*.
- You have enabled the cockpit at user level by choosing *Tools* → *Cockpit* → *Enable My Cockpit* in the SAP Business One, version for SAP HANA menu bar.
- You have authorizations for the KPI that you want to view. To set authorizations for KPIs to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user to whom you want to grant the authorization, and in *Analytics* → *Content* → *KPI*, select *Full Authorization* for the KPIs for which you want to grant authorization.

### Procedure

1. From the SAP Business One, version for SAP HANA navigation panel on the left side of the window, under *My Cockpit*, select the cockpit you want to use.  
The cockpit appears.
2. In the navigation panel, choose *Widget Gallery* → *General Widgets*.

3. Select *KPI Widget* and drag it into the open cockpit area.

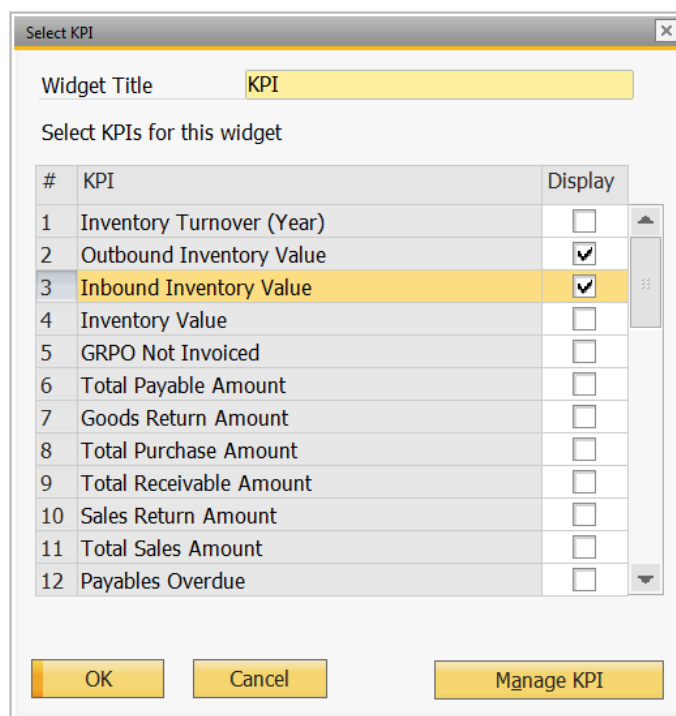

A window appears.

4. To add a KPI to your cockpit, in the upper right section of the window, choose  (*Tools*).
5. From the dropdown list, choose *Settings*.

The *Select KPI* window appears, listing all the KPIs for which you have authorizations.

6. To add one or more KPIs to the cockpit, select the appropriate checkbox.

7. To confirm your choices, choose the *OK* button.

The selected KPIs appear.

---

## 2.3 Viewing KPIs in the Fiori-Style Cockpit

For more information about viewing KPIs in the Fiori-style cockpit, look for the [How to Work with the Fiori-Style Cockpit](#) guide on [SAP Help Portal](#).

## 2.4 Managing KPIs in the Pervasive Analytics Designer

### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the [Working with App Framework for SAP Business One, version for SAP HANA](#) guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To grant authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user for whom you want to set authorizations, and under [Analytics](#), in [Pervasive Analytics Designer](#), select [Full Authorization](#).

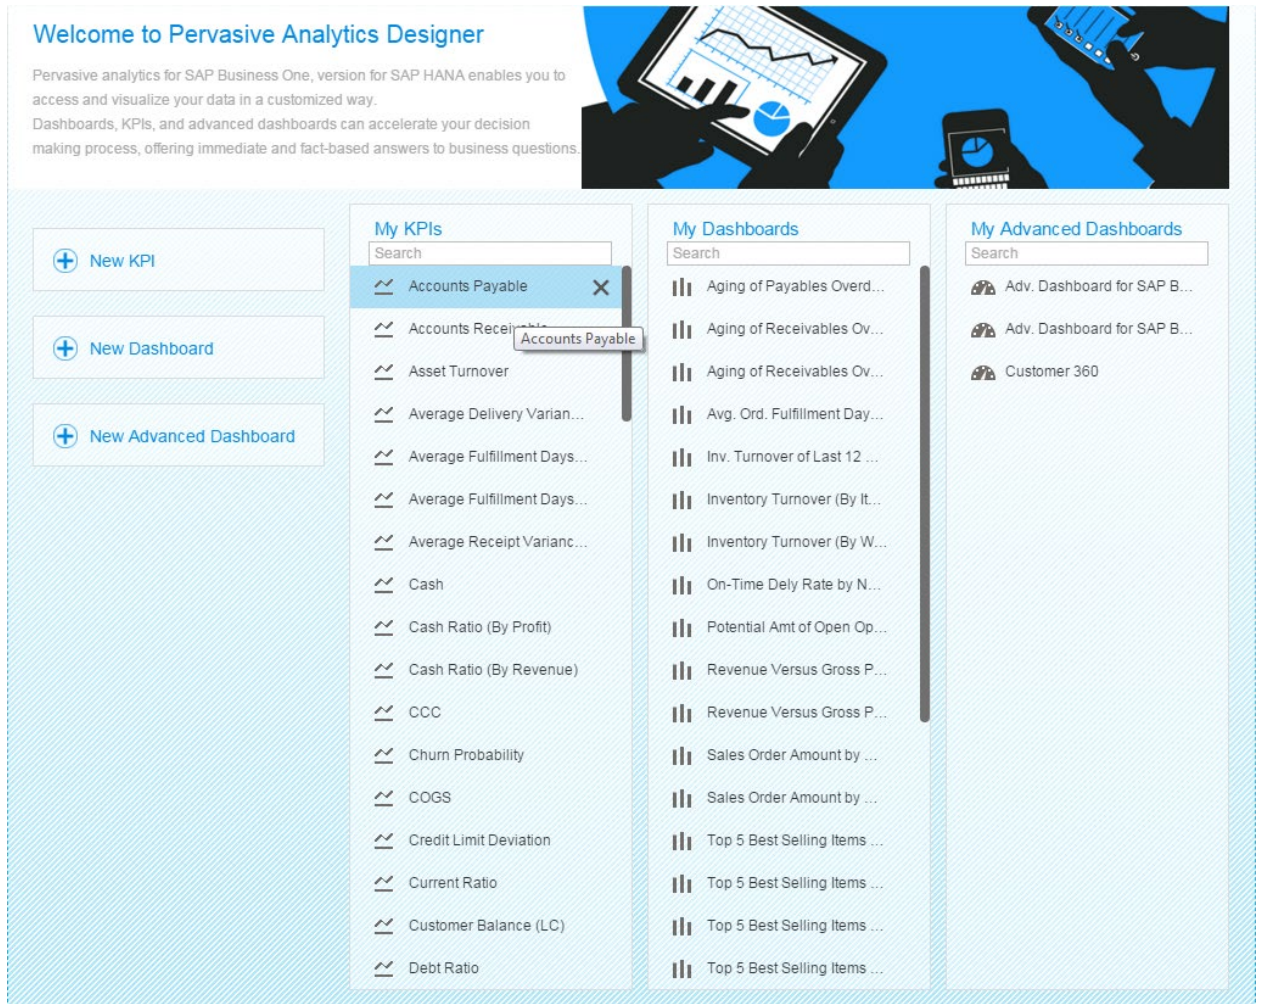

### Procedure

1. In the SAP Business One, version for SAP HANA toolbar, choose  ([Pervasive Analytics](#)). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose [Tools](#) → [Pervasive Analytics](#). The [Pervasive Analytics](#) window appears.

#### Note

Only users with authorizations for the pervasive analytics designer can access this window.

2. In the *My KPIs* section, you can find all the KPIs, for which you can perform the following:
  - o Select each KPI to view its contents.
  - o To delete a KPI, hover your mouse over the relevant KPI, choose the  icon, and choose the *Yes* button in the system message.

## 2.5 Predefined KPIs

### Note

The predefined KPIs in the four localizations (CN, DE, GB, US) are available for the following charts of accounts:

Chart of Accounts	Local Settings
<i>M</i> - 股份有限公司会计制度	China
<i>C</i> - <i>US_CoA</i>	United States Of America/Puerto Rico

Chart of Accounts	Local Settings
<a href="#">N - SKR03</a>	Germany
<a href="#">G - GB_CoA</a>	United Kingdom/Ireland

### Note

The predefined KPIs in the localization [All](#) are available for all charts of accounts in all localizations.

KPIs can differ among companies, depending on industries and company goals. The 57 predefined KPIs are the most commonly used ones that reflect a company's financial performances.

You can focus on individual KPIs to measure the performance at a specific requirement. You can also group the KPIs in a certain area to get a whole and comprehensive picture of your company's financial performances.

The predefined KPIs are in the following areas:

- Working capital management:

Working capital is the amount of a company's current assets minus its current liabilities. The working capital ensures that the company is able to carry out its day-to-day operations, as well as to satisfy its maturing short-term debt and the upcoming operational expenses.

The following predefined KPIs help you measure and monitor your company's working capital:

- Accounts Payable (CN, DE, GB, US)
- Accounts Receivable (CN, DE, GB, US)
- Cash (CN, DE, GB, US)
- CCC (CN, DE, GB, US)
- Customer Receivables
- DIO (CN, DE, GB, US)
- DPO (CN, DE, GB, US)
- DSO (CN, DE, GB, US)
- Inventory (CN, DE, GB, US)
- Inventory Turnover (CN, DE, GB, US)
- Inventory Turnover (Year)
- OC (CN, DE, GB, US)
- Open Amount of Deliveries for Customer
- Working Capital (CN, DE, GB, US)

- Profitability ratios:

Profitability measures a company's ability to generate earnings considering sales, assets and equity. It highlights a company's efficiency for gaining profits. It is important to company owners and investors.

The following predefined KPIs help you define and measure your company's profitability:

- Asset Turnover (CN, DE, GB, US)
- Gearing Ratio (CN, DE, GB, US)
- Gross Profit (CN, DE, GB, US)
- Gross Profit (LTD)
- Gross Profit (YTD)
- Gross Profit Margin (CN, DE, GB, US)
- Gross Profit Margin (YTD)

- Net Profit Margin (CN, DE, GB, US)
- Operating Margin (CN, DE, GB, US)
- ROE (CN, DE, GB, US)

- Liquidity ratios:

Liquidity is a company's ability to pay off its short-term debts. It shows the proportion by which the current liabilities are covered by liquid assets. In general, the greater the coverage is, the more likely it is that the company is able to pay the debts when they fall due, and still be able to fund ongoing operations.

The following predefined KPIs reflect your company's liquidity:

- Cash Ratio (By Profit) (CN, DE, GB, US)
- Cash Ratio (By Revenue) (CN, DE, GB, US)
- Current Ratio (CN, DE, GB, US)
- Quick Ratio (CN, DE, GB, US)

- Debt Ratios (CN, DE, GB, US):

Debit ratio is calculated as a company's total debts to its total assets, which quantifies how leveraged a company is. It indicates how much a company relies on the debts to finance its assets.

The higher the debt ratio is, the riskier the operations are; this means that the company needs to bear a higher proportion of cash flow that is generated from operations to pay the interests on its debts.

- Financial statements:

Financial statements are formal records that reflect a company's financial activities and performances in a financial period. The information is presented in a manner that is easy to understand. Typically, the following statements are included:

- Balance Sheet
- Cash Flow Statement
- Profit and Loss Statement

A company needs to prepare and show its financial statements to reveal its financial activities and performances. The public and stakeholders thus can make their financial decisions based on the financial statements.

The following predefined KPIs show the main and important statement items:

- Accounts Payable (CN, DE, GB, US)
- Accounts Receivable (CN, DE, GB, US)
- Cash (CN, DE, GB, US)
- COGS (CN, DE, GB, US)
- Gross Profit (CN, DE, GB, US)
- Inventory (CN, DE, GB, US)
- Net Cash Flow (CN, DE, GB, US)
- Net Cash Flow (Financial) (CN, DE, GB, US)
- Net Cash Flow (Investment) (CN, DE, GB, US)
- Net Cash Flow (Operating) (CN, DE, GB, US)
- Net Profit (CN, DE, GB, US)
- Total Assets (CN, DE, GB, US)
- Total Current Assets (CN, DE, GB, US)
- Total Current Liabilities (CN, DE, GB, US)

- Total Equity (CN, DE, GB, US)
- Total Liabilities (CN, DE, GB, US)

- Daily operation indexes:

The following predefined KPIs help you monitor and evaluate some important parts or aspects of your company's daily operations:

- Expense 1 (DE, GB, US)
- Expense 2 (DE, GB, US)
- Inventory Value
- Operating Cost (DE, GB, US)
- Operating Income (CN, DE, GB, US)

The following predefined KPIs help you monitor and evaluate the important parts or aspects from the sales side:

- Average Delivery Variance Days
- Average Fulfillment Days for a Sales Order
- Net Sales Revenue (CN, DE, GB, US)
- Number of Open Deliveries
- Number of Open Sales Orders
- Number of Open Sales Quotations
- Number of Open Service Calls
- On-Time Delivery Rate
- Open Amount of Deliveries
- Outbound Inventory Value
- Receivables Overdue
- My Sales Amount (with Tax) for Current Month
- Sales Return Amount
- Sales Return Amount for This Year
- Total Receivable Amount
- Total Receivable Amount (LTD)
- Total Sales Amount
- Total Sales Amount (LTD)
- Total Sales Amount (YTD)

The following predefined KPIs help you monitor and evaluate the important parts or aspects from the purchasing side:

- Average Fulfillment Days for a Purchase Order
- Average Receipt Variance Days
- Goods Return Amount
- GRPO Not Invoiced
- Inbound Inventory Value
- Payables Overdue
- Total Payable Amount
- Total Purchase Amount

- Customer relationship management (CRM):
  - Churn Probability
  - Credit Limit Deviation
  - Opportunity Win Rate (LTD)
  - Potential Amt of Open Opportunities
  - Potential Amount of My Open Opportunities
  - Weighted Amount of All Open Opportunities (LC)
  - Monthly Closed Tickets
  - Yearly In-Service Rate

For a complete list of predefined KPIs, see the table below.

**i** Note

For more information about financial KPI factors, see [Using Financial KPI Factors](#).

**i** Note

To see a specific query, in the menu bar, choose [Tools](#) → [Queries](#) → [Query Manager](#). For more information about the query manager, see [Query Manager](#) in the online help documentation.

KPI Name	KPI Description	Data Source	Interim or Not	Localization
<a href="#">Accounts Payable</a>	Accounts payable amount on the current day	Financial KPI factor <a href="#">Accounts Payable</a> (factor 007)	Yes	CN, DE, GB, US

<i>OC</i>	Operating cycle up to today in the current month.  Operating cycle, the average number of days a company takes in realizing its inventories in cash, equaling the time taken in selling inventories plus the time taken in recovering cash from trade receivables	KPI <i>DSO</i> + KPI <i>DIO</i>	No	CN, DE, GB, US
<i>On-Time Delivery Rate</i>	The total of the following: The result of the number of on-time delivered sales orders divided by the number of all delivered sales orders to each business partner.  This KPI covers sales orders within this year according to their document dates. The deliveries whose posting dates are earlier than or equal to the posting dates of sales orders are considered as on-time deliveries.  In Customer 360, this KPI displays the rate for the relevant customer.	Calculation view <i>On-Time Delivery Analysis</i>	No	All
<i>Open Amount of Deliveries</i>	Total open amount of all deliveries	Calculation view <i>Delivery Header</i>	No	All

KPI Name	KPI Description	Data Source	Interim or Not	Localization
<i>Open Amount of Deliveries for Customer</i>	<p>The total amount of all open deliveries. The data is taken from the <i>Total</i> field of the <i>Delivery</i> window whose status is <i>Open</i>.</p> <p>In the SAP Business One Sales app, this KPI appears on the <i>Dashboard</i> tab of customers by default and displays the total amount of all open deliveries of the specific customer.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <i>Sales Order</i>	No	All
<i>Operating Cost</i>	Operating cost generated up to today in the current month	Financial KPI factor <i>Operating Costs</i> (factor 017)	Yes	DE, GB, US
<i>Operating Income</i>	Operating income gained up to today in the current month	Financial KPI factor <i>Operating Income</i> (factor 018)	No	CN
		KPI <i>Gross Profit</i> – KPI <i>Operating Cost</i>		DE, GB, US
<i>Operating Margin</i>	Operating margin up to today in the current month	KPI <i>Operating Income</i> ÷ KPI <i>Net Sales Revenue</i>	No	CN, DE, GB, US
<i>Opportunity Win Rate (LTD)</i>	The result of the number of won opportunities divided by the number of all opportunities until today	Calculation view <i>Opportunity Win Rate Analysis</i>	No	All
<i>Outbound Inventory Value</i>	Outbound inventory value in the current month	User-defined query <i>Outbound Inventory Value</i>	No	All
<i>Payables Overdue</i>	Payables overdue up to today	(total <i>Balance Due</i> – total <i>Future Remit</i> ) in the <i>Vendor Liabilities Aging</i> report	No	All
<i>Potential Amount of My Open Opportunities</i>	The total potential amount of all open opportunities of the currently logged-on sales employee. The data is taken from the <i>Potential Amount</i> field on the <i>Potential</i> tab of the <i>Opportunity</i> window of the currently logged-on sales employee.	User-defined query <i>Opportunity</i>	No	All

KPI Name	KPI Description	Data Source	Interim or Not	Localization
	In the SAP Business One Sales app, this KPI appears in the KPI screen by default. For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a> .			
<i>Potential Amt of Open Opportunities</i>	The total potential amount of all open opportunities whose start dates are within this year. The data is taken from the <i>Potential Amount</i> field on the <i>Potential</i> tab of the <i>Opportunity</i> window.	Calculation view <i>Opportunities</i>	No	All
<i>Quick Ratio</i>	An indication of a company's ability to use its near cash or quick assets to extinguish or retire its current liabilities immediately on the current day	$(\text{KPI Cash} + \text{KPI Accounts Receivable}) \div \text{KPI Total Current Liabilities}$	No	CN, DE, GB, US
<i>Receivables Overdue</i>	Receivables overdue up to today	$(\text{total Balance Due} - \text{total Future Remit})$ in the <i>Customer Receivables Aging</i> report	No	All
<i>ROE</i>	Return on equity, an indication of a company's efficiency at generating profits from every unit of its total equity up to today in the current month	$\text{KPI Net Profit} \div \text{KPI Total Equity}$	No	CN, DE, GB, US
<i>Sales Return Amount</i>	Sales return amount in the current month	User-defined query <i>Sales Return Amount</i>	No	All
<i>Sales Return Amount for This Year</i>	Total amount of sales returns whose posting dates are within this year	Calculation view <i>Return Header</i>	No	All
<i>Total Assets</i>	Total assets on the current day	Financial KPI factor <i>Total Assets</i> (factor 006)	No	CN, DE, GB, US
<i>Total Current Assets</i>	Total current assets amount on the current day	Financial KPI factor <i>Current Assets</i> (factor 005)	Yes	CN, DE, GB, US
<i>Total Current Liabilities</i>	Total current liabilities amount on the current day	Financial KPI factor <i>Current</i>	Yes	CN, DE, GB, US

KPI Name	KPI Description	Data Source	Interim or Not	Localization
		<i>Liabilities</i> (factor 008)		
<i>Total Equity</i>	Total equity on the current day	Financial KPI factor <i>Total Equity</i> (factor 011)	No	CN, DE, GB, US
<i>Total Liabilities</i>	Total liabilities on the current day	Financial KPI factor <i>Total Liabilities</i> (factor 010)	No	CN, DE, GB, US
<i>Total Payable Amount</i>	Total payable amount in the current month	User-defined query <i>Total Payable Amount</i>	No	All
<i>Total Purchase Amount</i>	Total purchase amount in the current month	User-defined query <i>Total Purchase Amount</i>	No	All
<i>Total Receivable Amount</i>	Total receivable amount in the current month	User-defined query <i>Total Receivable Amount</i>	No	All
<i>Total Receivable Amount (LTD)</i>	Total receivable amount until today	Calculation view <i>Customer Receivables Aging</i>	No	All
<i>Total Sales Amount</i>	Total sales amount in the current month	User-defined query <i>Total Sales Amount</i>	No	All
<i>Total Sales Amount (LTD)</i>	Total sales amount until today	Calculation view <i>Profitability Analysis</i>	No	All
<i>Total Sales Amount (YTD)</i>	Total sales amount in this year so far	Calculation view <i>Profitability Analysis</i>	No	All
<i>Weighted Amount of All Open Opportunities (LC)</i>	Total (YTD) weighted amount of all open sales opportunities displayed in the local currency. The KPI covers opportunities within the current year according to their start dates.	Calculation view <i>Opportunity Win Rate Analysis</i>	No	All
<i>Working Capital</i>	Total working capital up to the current day	KPI <i>Cash</i> + KPI <i>Accounts Receivable</i> + KPI <i>Inventory</i> – KPI <i>Accounts Payable</i>	No	CN, DE, GB, US

KPI Name	KPI Description	Data Source	Interim or Not	Localization
<a href="#">Yearly In-Service Rate</a>	<p>The percentage of your service tickets with valid service contracts over the last 12 months.</p> <p>In the SAP Business One Service app, this KPI appears in the KPI screen by default.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">Yearly In-Service Rate</a>	No	All

---

## 3 Working with Pervasive Dashboards

The pervasive analytics designer enables you to design pervasive dashboards of your own based on the following:

- Queries in SAP Business One, version for SAP HANA
- Calculation views in the SAP HANA database

### Note

- For a newly created company in SAP Business One 9.2, version for SAP HANA, the compatibility mode is *Off*, and thus only calculation views are available.
- SAP Business One 9.2, version for SAP HANA companies upgraded from versions that have the compatibility mode feature, will have the same settings for the compatibility mode as the previous versions.
- The compatibility mode is *On* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are initializedThus, they will have the previously provided analytic and attribute views.
- The compatibility mode is *Off* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are not initialized

Thus, only calculation views are available.

For more information about the compatibility mode, look for the *SAP Business One Administrator's Guide, version for SAP HANA* on [SAP Help Portal](#).

In the pervasive analytics designer, you can also add the following types of actions to pervasive dashboards. For more information, see [Adding Actions to Pervasive Dashboards](#).

- Link the pervasive dashboards to SAP Business One, version for SAP HANA windows, and the pervasive dashboards will appear in sidebars.
- Open SAP Business One, version for SAP HANA windows.
- Trigger enterprise search.
- Open advanced dashboards.

The actions will appear when you right-click the data of pervasive dashboards in the Fiori-style cockpit or an advanced dashboard.

### Note

For more information about the semantic layer data sources, look for the *How to Work with Semantic Layers* guide on [SAP Help Portal](#).

---

## 3.1 Designing Pervasive Dashboards Using the Pervasive Analytics Designer

For more information about creating crystal dashboards for SAP Business One, version for SAP HANA using SAP Crystal Dashboard Design, look for the [How to Develop Your Own Dashboards](#) guide on [SAP Help Portal](#).

### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the [Working with App Framework for SAP Business One, version for SAP HANA](#) guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To set authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user for whom you want to set authorizations, and under [Analytics](#), in [Pervasive Analytics Designer](#), select [Full Authorization](#).

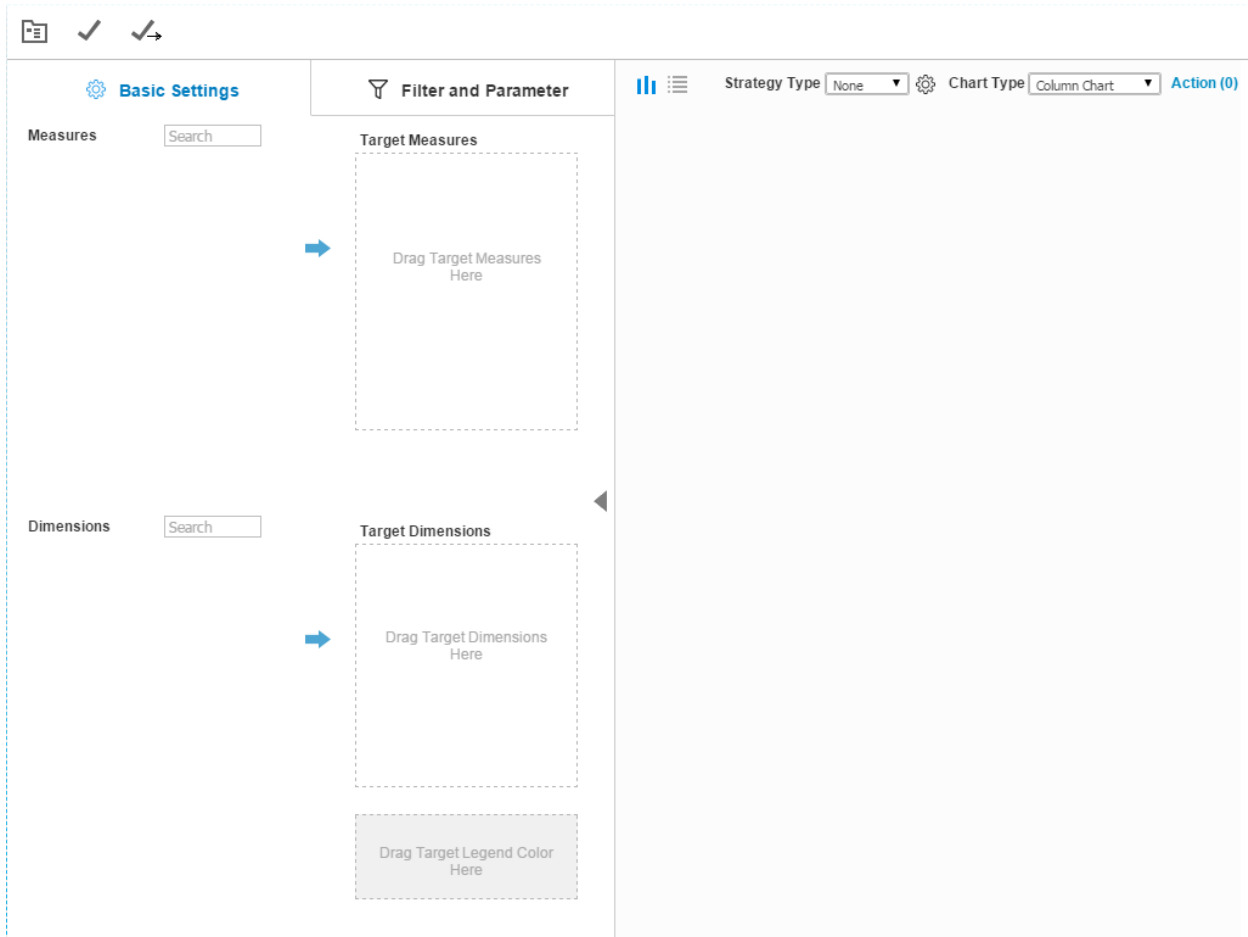

### Procedure

1. In the SAP Business One, version for SAP HANA toolbar, choose  ([Pervasive Analytics](#)). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose [Tools](#) → [Pervasive Analytics](#). The [Pervasive Analytics](#) window appears.

#### Note

Only users with authorizations for the pervasive analytics designer can access the window.

- On the left side of the *Pervasive Analytics* window, choose *New Dashboard*.  
The dashboard designer appears.

- In the upper left corner of the dashboard designer, choose  (*Select Base Data Source*).

The screenshot shows the 'Select Base Data Source' window. On the left, there is a tree view with 'User-Defined Query' and 'System' categories. Under 'System', 'Sales Order Without Deposit' is selected. The main area displays a SQL query and a table of data.

#	Customer Code	Customer Name	Sales Order No.	Document Date	Due Date	Total Amount of Order
1	C20000	Norm Thompson	1	2006-01-10 00:00:00.000000000	2006-01-20 00:00:00.000000000	14310
2	C30000	Microchips	2	2006-01-15 00:00:00.000000000	2006-01-25 00:00:00.000000000	2976.88
3	C40000	Earthshaker Corporation	3	2006-01-20 00:00:00.000000000	2006-01-30 00:00:00.000000000	12535
4	C23900	Parameter Technology	4	2006-01-25 00:00:00.000000000	2006-02-04 00:00:00.000000000	7473
5	C42000	Mashina Corporation	5	2006-01-30 00:00:00.000000000	2006-02-10 00:00:00.000000000	18391
6	C30000	Microchips	6	2006-02-15 00:00:00.000000000	2006-02-25 00:00:00.000000000	8795.31
7	C40000	Earthshaker Corporation	7	2006-02-21 00:00:00.000000000	2006-03-03 00:00:00.000000000	10573
8	C20000	Norm Thompson	8	2006-02-25 00:00:00.000000000	2006-03-07 00:00:00.000000000	6998
9	C23900	Parameter Technology	9	2006-03-05 00:00:00.000000000	2006-03-15 00:00:00.000000000	10494
10	C50000	ADA Technologies	10	2006-03-16 00:00:00.000000000	2006-03-26 00:00:00.000000000	29835.45
11	C60000	SG Electronics	11	2006-03-20 00:00:00.000000000	2006-03-30 00:00:00.000000000	19202.61
12	C70000	Aquent Systems	12	2006-03-25 00:00:00.000000000	2006-04-04 00:00:00.000000000	33014.99
13	C70000	Aquent Systems	13	2006-03-30 00:00:00.000000000	2006-04-09 00:00:00.000000000	8202.48

The *Select Base Data Source* window appears, displaying the following:

- All the system and customized *SELECT* queries
- All the deployed calculation views in the SAP HANA database

### Note

- For a newly created company in SAP Business One 9.2, version for SAP HANA, the compatibility mode is *Off*, and thus only calculation views are available.
- SAP Business One 9.2, version for SAP HANA companies upgraded from versions that have the compatibility mode feature, will have the same settings for the compatibility mode as the previous versions.
- The compatibility mode is *On* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are initialized

Thus, they will have the previously provided analytic and attribute views.
- The compatibility mode is *Off* for SAP Business One 9.2, version for SAP HANA companies upgraded from versions that:
  - Do not have the compatibility mode feature
  - Are not initialized

Thus, only calculation views are available.

For more information about the compatibility mode, look for the [SAP Business One Administrator's Guide, version for SAP HANA](#) on [SAP Help Portal](#).

- In the [Select Base Data Source](#) window, select or search for the query or view based on which you want to design a pervasive dashboard. The right side of the window displays the details and up to 20 results.  
[Optional] If you select a query, to open the query, choose the [Edit Data Source](#) button.
- In the [Select Base Data Source](#) window, choose the [OK](#) button.

If you selected a query, the [Measures](#) area displays numerical columns of the query, and the [Dimensions](#) area displays non-numerical columns of the query.

If you selected a view, the [Measures](#) area displays the measures and calculated measures of analytic views, or measures of calculation views, and the [Dimensions](#) area displays the attributes of views.

- On the [Basic Settings](#) tab, specify the basic settings of the pervasive dashboard. For more information, see [Basic Settings Tab](#).

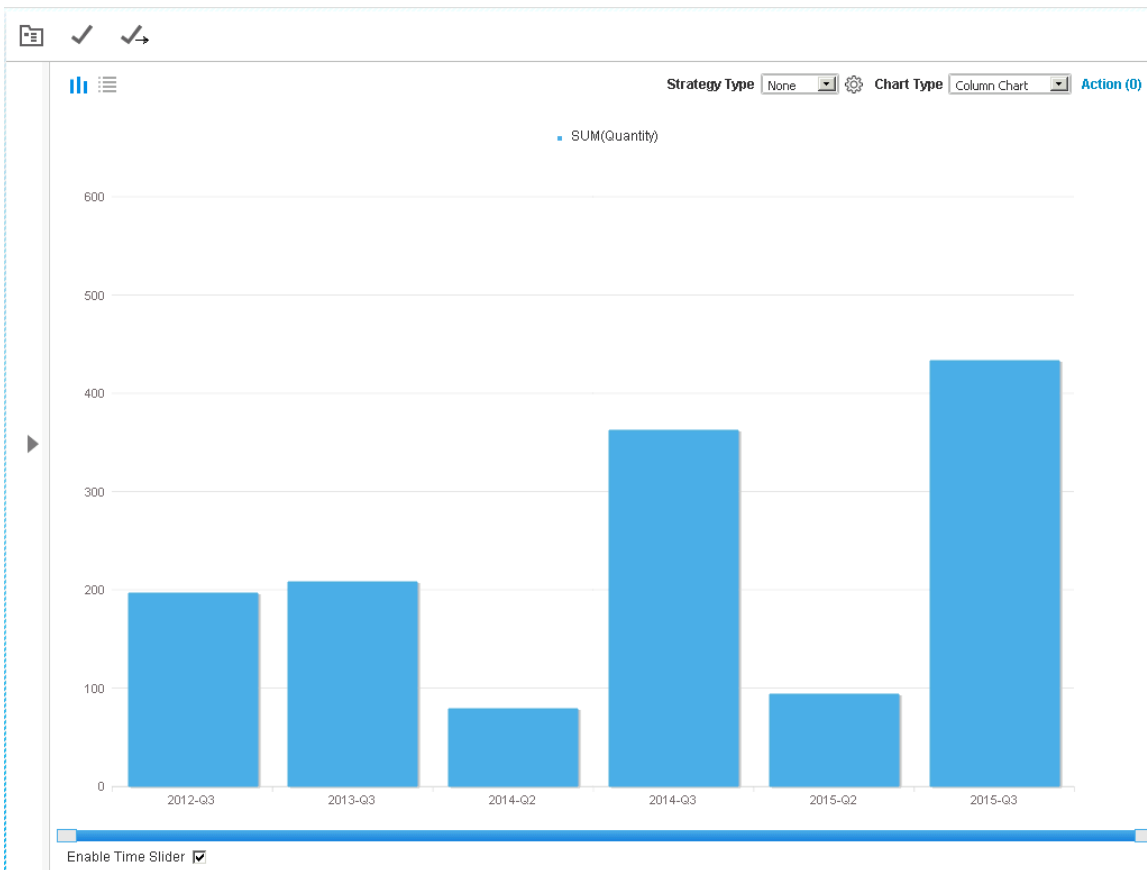

- [Optional] On the *Filter and Parameter* tab, specify filters and parameters. For more information, see [Filter and Parameter Tab](#).

The screenshot shows a software interface with a top navigation bar and a main content area. The top bar includes a menu icon, a checkmark, and a right-pointing arrow. Below this, there are two tabs: 'Basic Settings' (with a gear icon) and 'Filter and Parameter' (with a funnel icon). The 'Filter and Parameter' tab is active and contains several sections:

- Parameters:** A large empty rectangular area on the left side of the tab.
- Active Parameters:** A dashed rectangular box on the right side containing the text 'Drag Target Parameters Here'.
- Dimensions:** A section on the left containing a search input field with the placeholder text 'Search' and four input fields with the following labels: 'Customer Code', 'Customer Name', 'Document Date', and 'Due Date'.
- Active Filters:** A dashed rectangular box on the right side containing the text 'You are currently exploring all data; to filter data, drag dimensions here'.

At the top right of the main content area, there is a 'Strategy Type' dropdown menu set to 'None' and a 'Chart Type' dropdown menu set to 'Column Chart'. To the right of these menus is an 'Action (0)' button.

8. [Optional] In the dashboard result area, you can perform the following:
  - o Select a strategy type to perform data analysis. For more information, see [Using Strategies in the Dashboard Designer](#).
  - o Choose *Action* and add actions to the pervasive dashboard. For more information, see [Adding Actions to Pervasive Dashboards](#).
  - o Enable the time slider for displaying time-related data. For more information, see [Using the Time Slider](#).

9. To save the dashboard, in the upper left corner, choose ✓ (*Save*); to save the dashboard as a new one, if you opened an existing dashboard, in the upper left corner, choose ✓→ (*Save As*).

### 3.1.1 Basic Settings Tab

On the *Basic Settings* tab of the dashboard designer, drag the required measures and dimensions to the target areas to design your own dashboard. During your design process, the dashboard on the right displays real-time results.

---

## Procedure

On the *Basic Settings* tab, you can perform the following:

- For target measures, you can perform the following:
  - Select a calculation method for the measures: *Sum*, *Cumulative Sum*, *Minimum*, *Maximum*, *Average*, *Count*, or *Original*. To do this, click the measure, and select *Calculation*.

### Note

Calculation method *Original* is not supported when you define a legend color. For more information about legend colors, see [Using Legend Color](#).

- Sort the data of the measures: *Ascending*, *Descending*, or *No Sorting*. To do this, either click the measure, and select *Sort*, or click the sort icon  on the right of the measure.
  - Change the legend name in the dashboard. To do this, click the measure, select *Rename*, enter the name, and click anywhere else in the dashboard.
  - Drag measures up and down to change their display order in the legend.
- For target dimensions, you can perform the following:
    - Set the number of top values from 5 to 300 using the *Limit to Top* bar.

### Note

For strategies *K-Means Clustering* and *ABC Analysis*, the *Limit to Top* bar is not available.

### Note

When the time slider is enabled, the *Limit to Top* bar is not available. For more information about the time slider, see [Using the Time Slider](#).

- Drag dimensions up and down to change their display order on the dimension axis.
- For dimensions of date type, select the time unit to display in the dashboard: *Year*, *Year-Quarter*, *Year-Month*, *Year-Week*, *Quarter*, *Month*, *Week*, and *Date*.

### Note

The *Enable Time Slider* checkbox is available only when you select *Year-Quarter*, *Year-Month*, *Year-Week*, and *Date*. For more information about the time slider, see [Using the Time Slider](#).

## **i** Note

When you add only one dimension, the dimension is of date type, and the time unit is only one of the following. In the SAP Business One mobile apps, this pervasive dashboard will have three time tabs at the bottom.

- If the time unit of the only dimension is *Year*, the default time tab in the pervasive dashboard in the SAP Business One mobile apps is *Year*.
- If the time unit of the only dimension is *Year-Quarter*, the default time tab in the pervasive dashboard in the SAP Business One mobile apps is *Quarter*.
- If the time unit of the only dimension is *Year-Month*, the default time tab in the pervasive dashboard in the SAP Business One mobile apps is *Month*.

For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see [Predefined Advanced Dashboards](#).

For more information about the mobile apps, look for the guides *Working with SAP Business One Sales Mobile App* or *Working with SAP Business One Service Mobile App* on [SAP Help Portal](#).

- For legend color, you can slice corresponding measure values from the measure axis in comparison to the dimension that slices corresponding measure values from the dimension axis. For more information, see [Using Legend Color](#).

### 3.1.1.1 Using Legend Color

## **i** Note

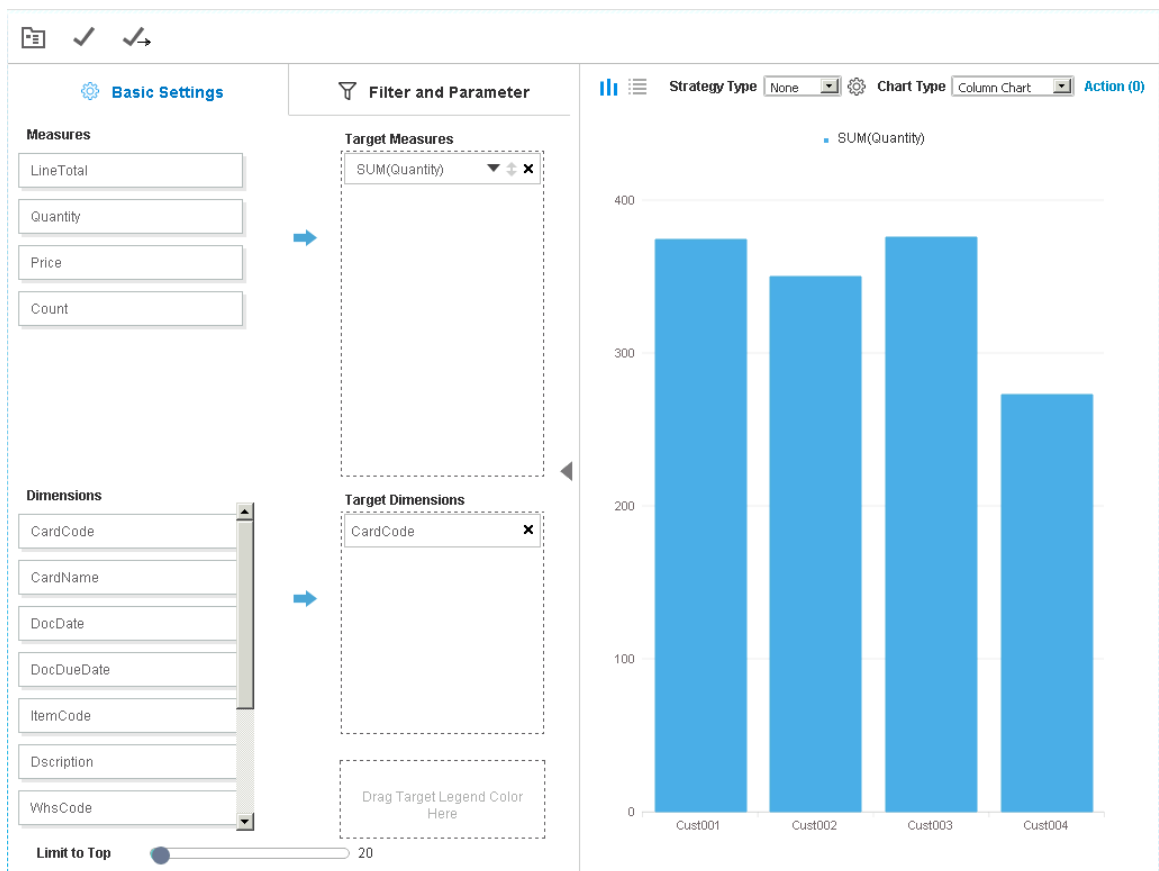

You cannot use strategies if you are using the legend color function.

## Prerequisites

- You have added only one measure, and its calculation method is not *Original*.
- You have added only one dimension.
- You are using the following chart types:
  - Column chart
  - Line chart
  - Stacked column chart
  - Multiple bar chart
  - Stacked bar chart

## Procedure

1. In the *Select Base Data Source* window of the dashboard designer, select the query or view based on which you want to design a pervasive dashboard.
2. On the *Basic Settings* tab, drag required measures and dimensions to the target area.  
The screenshot displays the sales quantities of each customer.

3. Drag another dimension to the legend color area.  
A value selection window appears, listing all the values in this dimension.

## Note

You can select a maximum of three values.

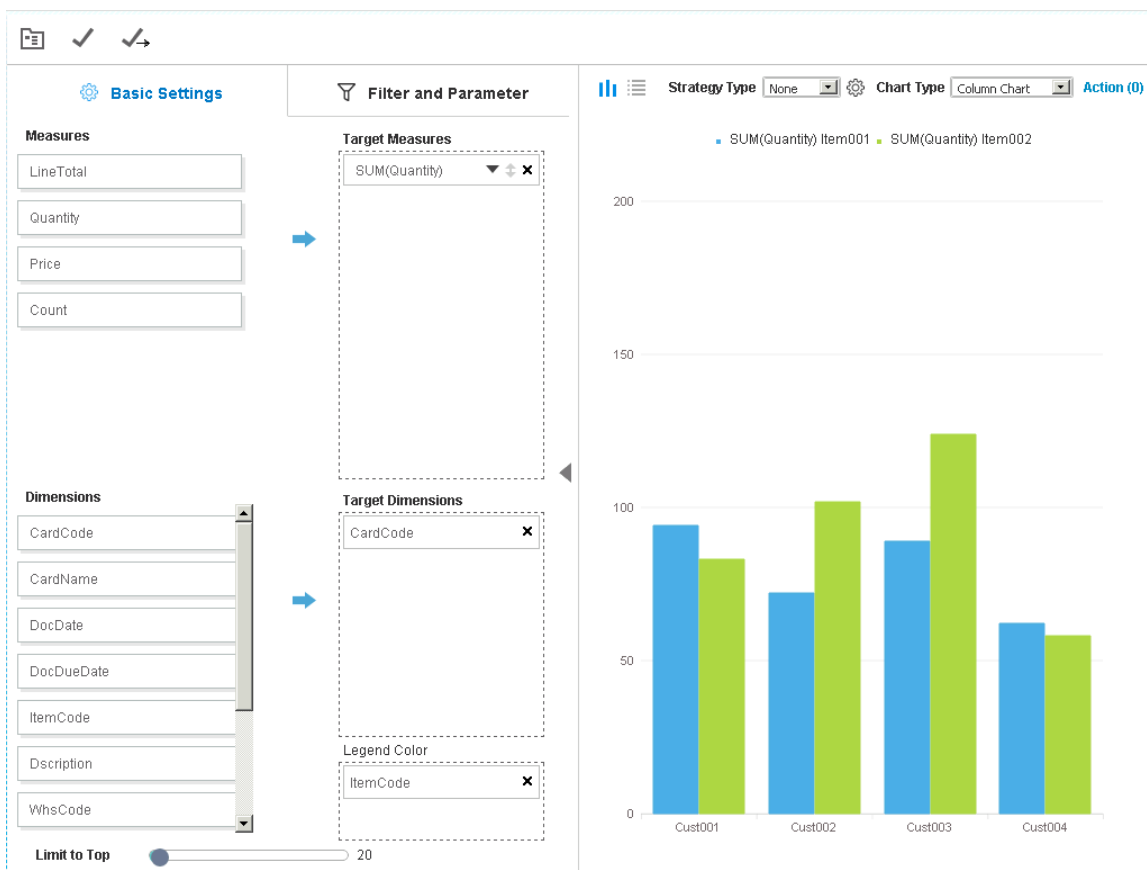

In the screenshot, item code is applied as the legend color, and *Item001* and *Item002* were selected as the slicing values.

#	ItemCode	<a href="#">Clear</a>
1	Item001	<input checked="" type="checkbox"/>
2	Item002	<input checked="" type="checkbox"/>
3	Item003	<input type="checkbox"/>
4	Item004	<input type="checkbox"/>

Buttons: Add, Cancel

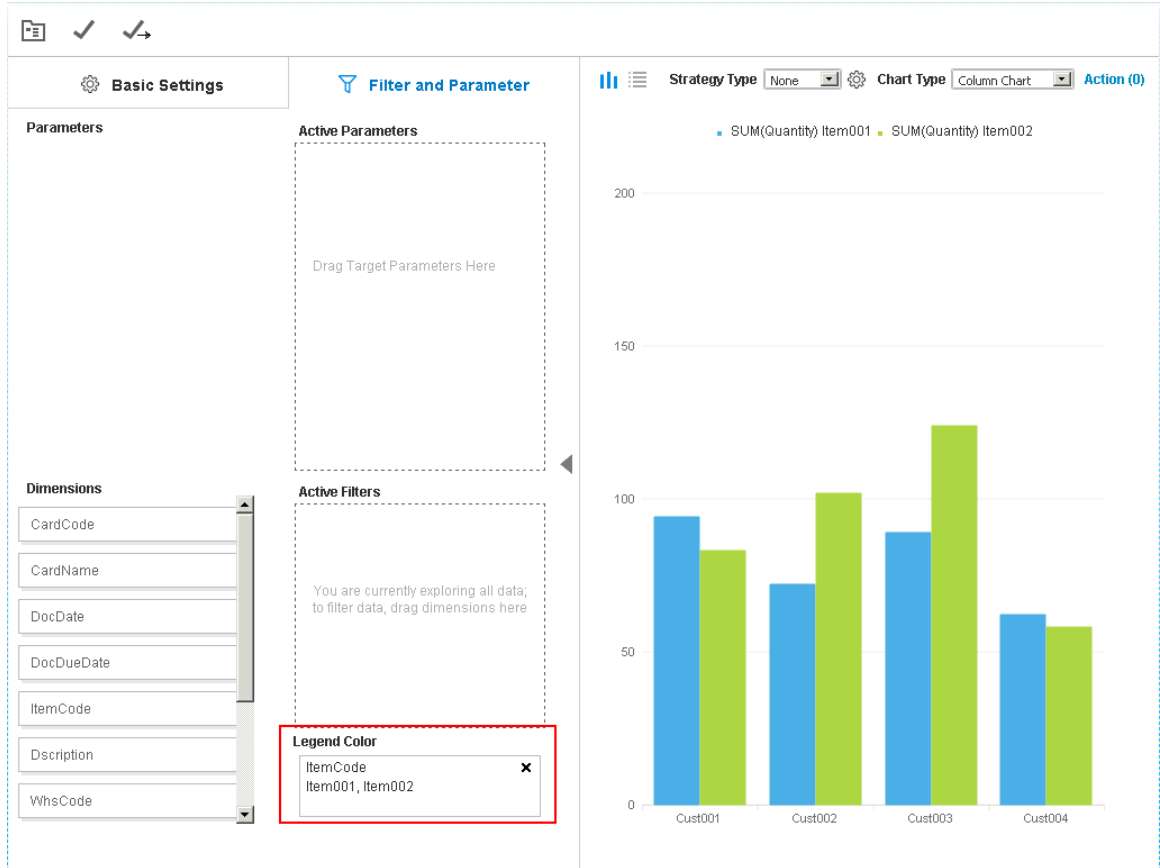

4. Select the values that you want to use to slice the measure values, and choose the [Add](#) button. The result area shows measure values sliced by the legend color values you selected. The screenshot displays the sales quantities of *Item001* and *Item002* for each customer.

5. [Optional] To modify the legend color values, on the [Basic Settings](#) tab, click the legend color. The value selection window appears.

## Result

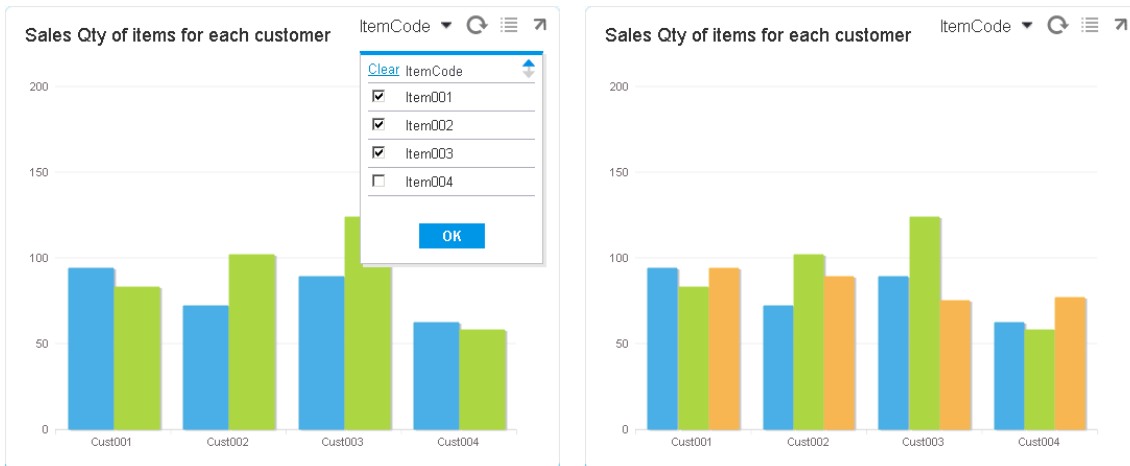

- The legend color values appear on the *Filter and Parameter* tab. To edit or delete the legend color, go back to the *Basic Settings* tab.

- In the advanced dashboard, you can view more or fewer legend color values. In the screenshots, *Item003* was also selected to display its sales quantities for each customer.

**i Note**

Changing the legend color value only changes the display of this pervasive dashboard in the advanced dashboard. This does not change the pervasive dashboard.

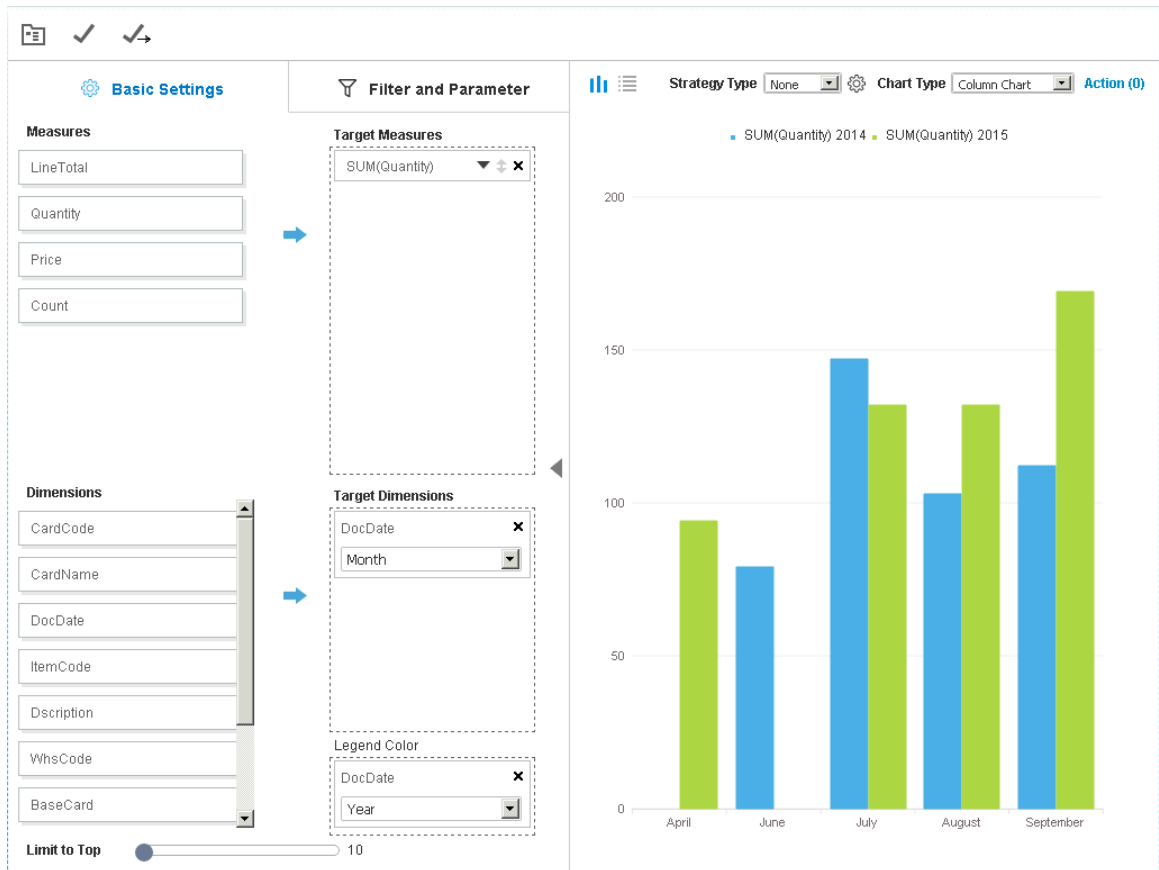

## Useful Information

- When you drag a date type dimension to the legend color area, the time unit is automatically set to *Year*.
- When you drag a date type dimension to the legend color area, if the target dimension is also of date type, the time unit of the target dimension must be *Quarter*, *Month*, or *Week*.

The dashboard in the screenshot shows the monthly sales quantities in 2014 and 2015.

### 3.1.2 Filter and Parameter Tab

If you selected a query, the *Parameters* area displays the condition parameters.

If you selected a view, the *Parameters* area displays the input parameters of views.

On the *Filter and Parameter* tab of the dashboard designer, drag the required parameters and dimensions to the target areas to design your own dashboard. During your design process, the dashboard on the right displays real-time results.

## Procedure

On the *Filter and Parameter* tab, you can perform the following:

- For parameters, you can perform the following:
  1. Drag the parameters to the target area.  
The *Parameter Editor* window appears.
  2. In the *Parameter Editor* window, perform the following based on the type of the parameter:
    - For a date type parameter, specify a default date.

Parameter Editor(P\_AgingDate)

Select a Date

Beginning Of This Year

End Of This Year

Current Date

Add | Cancel

- For a number type parameter, specify a default number.

Parameter Editor(P\_AgingBucketSize)

Default Value

Add | Cancel

- For a string type parameter, specify a default value.

Parameter Editor(P\_BusinessPartnerType)

Default Value

Add | Cancel

3. To save the parameter settings, choose the *Add* button; to delete the parameter, in the target area, choose the **X** icon.

### **i** Note

Some parameters are labeled with a red rectangle. To get a meaningful pervasive dashboard, you must drag those parameters to the target area.

- For filters, you can perform the following:

1. Drag the dimensions to the filter area.

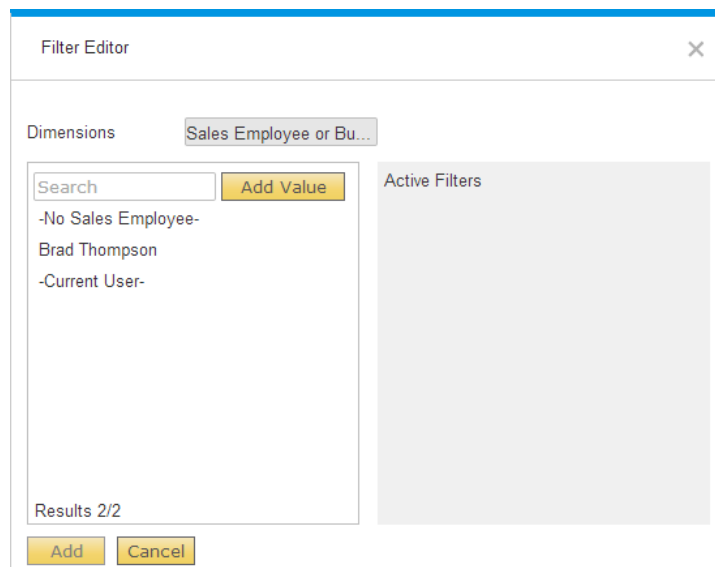

The *Filter Editor* window appears.

2. In the *Filter Editor* window, perform the following based on the type of the dimension:

- For a string type dimension, select a filtering value, or enter a filtering value and choose the *Add Value* button.

The filtering value is added to the *Active Filters* section.

For string type dimensions, *-Current User-* appears as a filtering value. If you choose this value, the code of the logged-on user will be used as the filtering value.

### **i** Note

When the target measures filtered by certain filtering values have records in the database, then such and only such filtering values appear in the list. If you want to use other filtering values, you need to enter them and choose the *Add Value* button.

- o For a date type dimension, define a time range.

3. To save the filter settings, choose the [Add](#) button; to delete the filter, in the target area, choose the **X** icon.

### 3.1.3 Dashboard Result Area

During your design process, this area displays real-time results. In this area, you can perform the following:

- To enlarge or restore the dashboard result area, choose ◀ or ▶.
- To change the chart types, in the [Chart Type](#) dropdown list, select the chart type that you want to use.

#### Note

The scatter chart supports at least two target measures.

The bubble chart supports at least three target measures.

- To toggle between the dashboard view and the query result view, choose  or .

#### Caution

In a pie chart, only the first dimension appears in the dashboard.

- Select a strategy type to perform data analysis. For more information, see [Using Strategies in the Dashboard Designer](#).
- Choose [Action](#) and add actions to the pervasive dashboard. For more information, see [Adding Actions to Pervasive Dashboards](#).
- Enable the time slider for displaying time-related data. For more information, see [Using the Time Slider](#).

### 3.1.3.1 Using Strategies in the Dashboard Designer

The pervasive analytics designer allows you to use the following strategies:

- **Forecast:** use this strategy to make forecasts based on your existing data.
- **K-Means Clustering:** use this strategy to group all your data according to the k-means algorithm. The k-means algorithm partitions  $n$  records into  $k$  clusters, in which each record belongs to the cluster with the nearest center.
- **ABC Analysis:** use this strategy to classify data into three categories based on the values of the target measure in descending order.

#### Prerequisites

You have performed the following:

- You have installed the Application Function Library (AFL), which includes the SAP HANA Predictive Analysis Library (PAL). For more information about the Predictive Analysis Library, see the *SAP HANA Predictive Analysis Library (PAL) Reference* guide at [http://help.sap.com/hana\\_platform](http://help.sap.com/hana_platform). For more information about the database role `PAL_ROLE`, look for the *SAP Business One Administrator's Guide, version for SAP HANA* on [SAP Help Portal](#).
- In the SAP HANA Studio, you have activated Script Server in your SAP HANA instance. See SAP Note 1650957 for further information.
- For a user-defined database user, you have assigned `PAL_ROLE` to this database user.
- You are not using the legend color or time slider function. For more information, see [Using Legend Color](#) and [Using the Time Slider](#), respectively.

#### 3.1.3.1.1 Using the Forecast Strategy

##### Prerequisite

In the dashboard designer, the type of all target dimensions must be `DATE`.

##### Procedure

1. In the *Select Base Data Source* window of the dashboard designer, select the query or view based on which you want to design a pervasive dashboard.
2. On the *Basic Settings* tab, specify the basic settings of the pervasive dashboard. For more information, see [Basic Settings Tab](#).

- In the dashboard designer, in the *Strategy Type* dropdown list, select *Forecast*.  
The forecast data appears in pink.

### **i** Note

The *Forecast* strategy supports only the column and line charts.

### **i** Note

The *Forecast* strategy supports only target dimensions whose display units are *Year*, *Quarter*, or *Month*. If there is more than one target dimension, their display units must be in the order of *Year*, *Quarter*, and *Month*.

- To modify settings for the strategy, choose the  icon beside the *Strategy Type* dropdown list. In the settings area, you can define the following:
  - Alpha*, *Beta*, *Gamma*: three factors used in the forecasting calculation. For detailed information about the calculation, see the *Double Exponential Smoothing* and *Triple Exponential Smoothing* sections in the *SAP HANA Predictive Analysis Library (PAL) Reference* guide at [http://help.sap.com/hana\\_platform](http://help.sap.com/hana_platform).
  - Forecasting Base Cycle*: the cycle used for forecasting. You can change the cycle according to your own situation. For example, if your production cycle is six months, and you have defined the smallest display unit as *Month*, you define the base cycle as *6*, and the forecast will be calculated on a six-month cycle basis.

---

The default cycle is determined by the smallest display unit you selected in the *Target Dimensions* area. For example, the default cycle is *4* when the smallest display unit is *Quarter*, and the default cycle is *12* when the smallest display unit is *Month*.

For cycle *1*, the *Double Exponential Smoothing* calculation is used. For cycles other than *1*, the *Triple Exponential Smoothing* calculation is used.

**i** Note

The number of the smallest display units with data in the database must be greater than or equal to the forecasting base cycle multiplied by 2.

- *Forecasting Period*: the number of display units to be forecast.

### 3.1.3.1.2 Using the K-Means Clustering Strategy

#### Procedure

1. In the *Select Base Data Source* window of the dashboard designer, select the query or view based on which you want to design a pervasive dashboard.
2. On the *Basic Settings* tab, specify the basic settings of the pervasive dashboard. For more information, see [Basic Settings Tab](#).

- In the dashboard designer, in the *Strategy Type* dropdown list, select *K-Means Clustering*. The clustered data appears.

### Note

The *Limit to Top* bar is not available for this strategy.

- To modify settings for the strategy, choose the gear icon beside the *Strategy Type* dropdown list. In the settings area, you can define the following:
  - Number of Clusters (k)*: the number of groups into which you want your data to be clustered. The default value is 3.
  - Normalization Type*: the type of the method that you want to use to normalize the data. Data normalization means adjusting values measured on different scales to a common scale. Pervasive analytics designer provides the following three options:
    - None*: no normalization type is used. This is the default value.
    - Percent*: for each point  $X(x_1, x_2, \dots, x_n)$ , the normalized value will be  $X'(x_1/S, x_2/S, \dots, x_n/S)$ , where  $S = |x_1| + |x_2| + \dots + |x_n|$ . Each value will be converted to a new value in percentage.
    - Linear*: for each column  $C$ , get the min and max value of  $C$ , and then  $C[i] = (C[i] - \min) / (\max - \min)$ . This normalization type is also known as the min-max normalization. It is a process of taking data measured in its engineering units (for example: miles per hour or degrees C) and transforming it to a value between 0.0 and 1.0, thus providing an easy way to compare values that are measured using different scales (for example degrees Celsius and degrees Fahrenheit) or different units of measure (speed and distance).

---

**i** Note

For detailed information about the calculation, see the *K-Means* section in the *SAP HANA Predictive Analysis Library (PAL) Reference* guide at [http://help.sap.com/hana\\_platform](http://help.sap.com/hana_platform).

### 3.1.3.1.3 Using the ABC Analysis Strategy

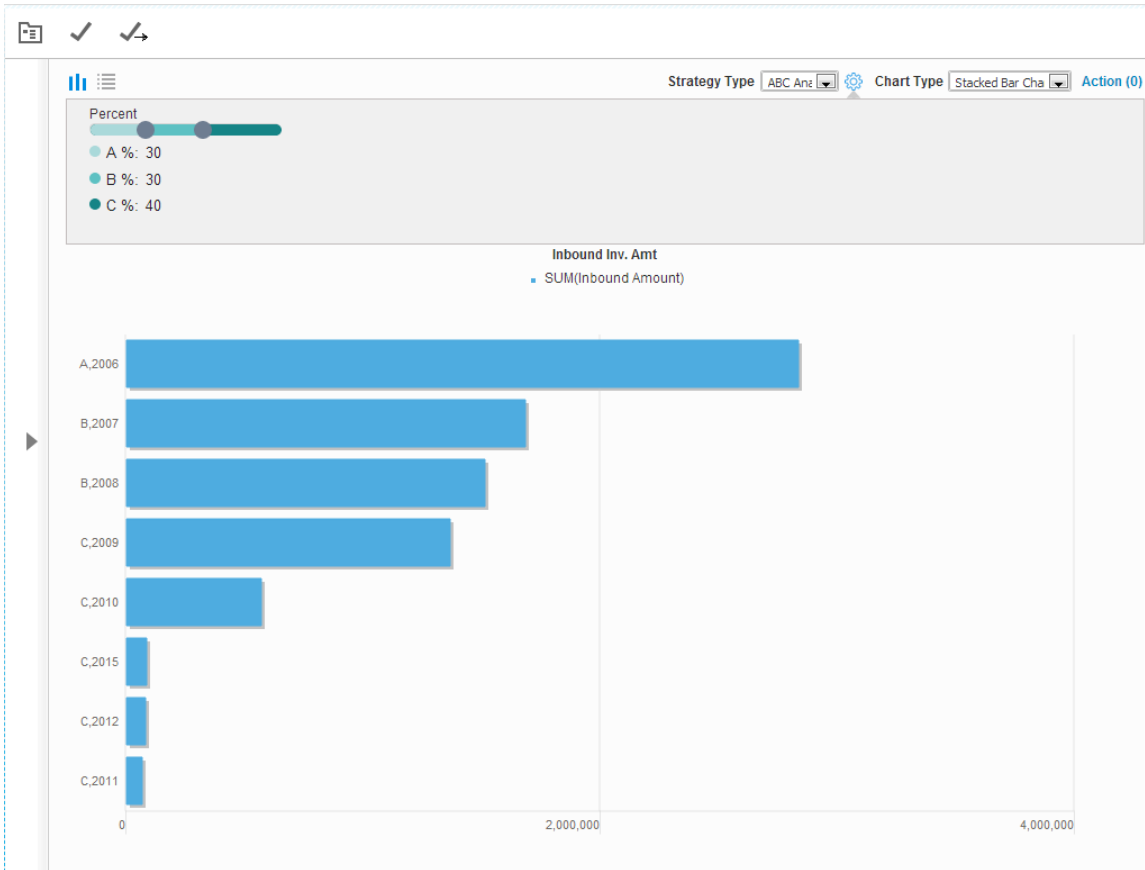

#### Prerequisite

In the dashboard designer, there must be only one target measure.

#### Procedure

1. In the *Select Base Data Source* window of the dashboard designer, select the query or view based on which you want to design a pervasive dashboard.
2. On the *Basic Settings* tab, specify the basic settings of the pervasive dashboard. For more information, see [Basic Settings Tab](#).

- In the dashboard designer, in the *Strategy Type* dropdown list, select *ABC Analysis*.  
The categorized data appears.

**i Note**

The *ABC Analysis* strategy supports all chart types except the scatter and bubble charts.

**i Note**

The *Limit to Top* bar is not available for this strategy.

- To modify settings for the strategy, choose the  icon beside the *Strategy Type* dropdown list. In the settings area, for the *Percent* parameter, you can define the specific percentage that you want each category to occupy out of the total value in descending order.

**i Note**

For detailed information about the calculation, see the *ABC Analysis* section in the *SAP HANA Predictive Analysis Library (PAL) Reference* guide at [http://help.sap.com/hana\\_platform](http://help.sap.com/hana_platform).

## 3.1.3.2 Adding Actions to Pervasive Dashboards

To access the action section of a pervasive dashboard, in the upper right corner of the dashboard designer, choose *Action*. The action section displays all the actions that you have defined.

### Procedure

To add actions to pervasive dashboards, follow the procedure below:

1. In the action section of a pervasive dashboard, choose  (*Add a New Action*) beside *Display Dashboard in Sidebars* or *Actions To Be Triggered*.  
The edit window appears.
2. You can add four types of actions. For more information, see the following sections.
3. To save the action, in the edit window, choose the *OK* button; to delete the action, in the action section, choose  (*Remove*) beside the action.

### 3.1.3.2.1 Action: Link to SAP Business One Window

With this type of action, the current pervasive dashboard will appear in the sidebar of the linked SAP Business One, version for SAP HANA window.

### Procedure

To add action type *Link to SAP Business One Window*, follow the procedure below:

1. In the action section of a pervasive dashboard, choose  (*Add a New Action*) beside *Display Dashboard in Sidebars*.
2. In the edit window, select the *Link to SAP Business One Window* radio button.

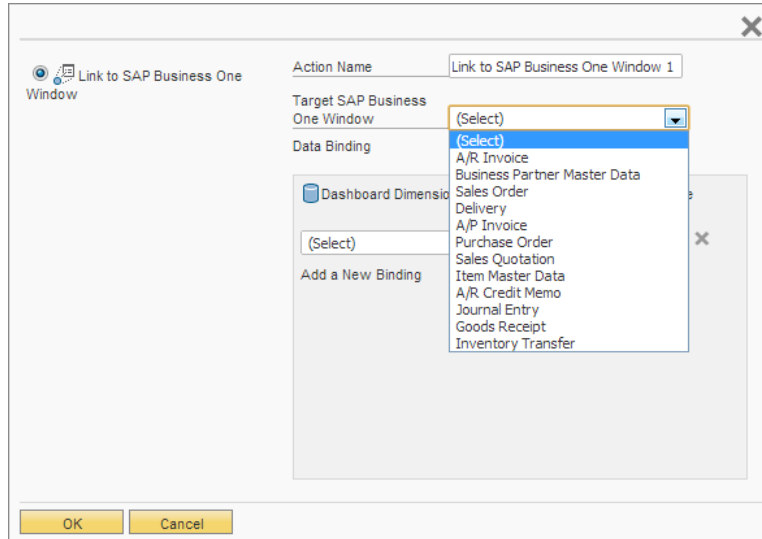

The screenshot shows a configuration dialog box for the 'Link to SAP Business One Window' action. The dialog has a title bar with a close button (X) in the top right corner. On the left side, there is a radio button selected next to the text 'Link to SAP Business One Window'. The main area contains the following fields:

- Action Name:** A text input field containing 'Link to SAP Business One Window 1'.
- Target SAP Business One Window:** A dropdown menu with '(Select)' as the current value.
- Data Binding:** A section containing two dropdown menus. The first is labeled 'Dashboard Dimension' and the second is labeled 'Target SAP Business One Window Field'. Both dropdowns currently show '(Select)'. An arrow points from the first dropdown to the second. Below these dropdowns is a button labeled 'Add a New Binding'.

At the bottom of the dialog, there are two buttons: 'OK' and 'Cancel'.

3. In the *Action Name* field, specify the action name.
4. In the *Target SAP Business One Window* dropdown list, select the window beside which you want your pervasive dashboard to appear. You can link to only one window with one action.

5. In the *Data Binding* section, select the dimension in the pervasive dashboard and link it to the field of the selected window. To add links to more fields, choose *Add a New Binding*.

The pervasive dashboard will appear beside the window that you defined in the action. The value of the defined field in the action is transferred to its linked dimension, and the pervasive dashboard will display the data with the dimension value equal to the field value that you are exploring.

For information about how to display the dashboard as a sidebar beside the linked window, see [Viewing Linked Pervasive Dashboards in Sidebars](#).

6. To save the action, choose the *OK* button.

The pervasive dashboard displays the quantities of the best-selling items to the company's customers. You link the customer dimension in the dashboard to the business partner name in the *Business Partner Master Data* window. When navigating to a specific business partner in the *Business Partner Master Data* window, in the sidebar, you can see the quantities of the best-selling items to this business partner.

Account	Balance
Local Currency	16,628.76
Deliveries	2,391.63
Orders	10,156.13
Opportunities	10

Item Code	Quantity
E10000	100
A00005	50
A00002	40
A00001	40
A00003	35
C00007	25
C00002	20
C00008	15
C00009	15
C00010	15

### 3.1.3.2.2 Action: Open SAP Business One Window

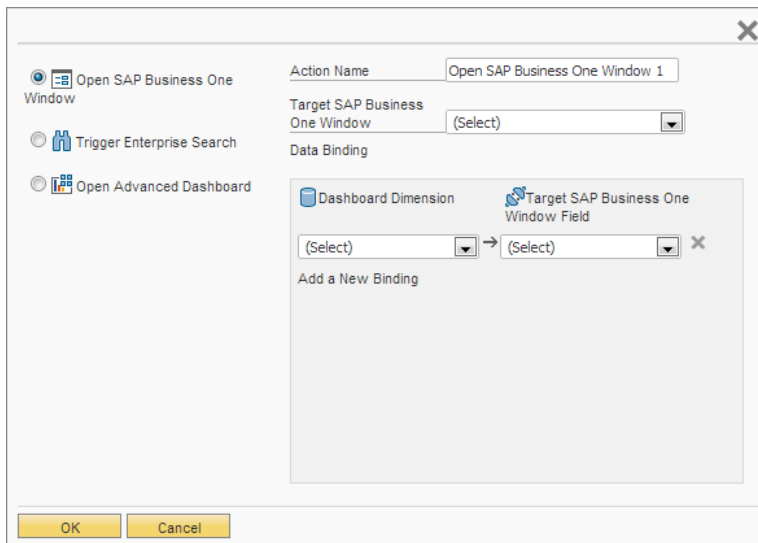

In the Fiori-style cockpit or an advanced dashboard, this type of action will appear when you right-click the data of pervasive dashboards. Choose this action to open the corresponding SAP Business One, version for SAP HANA window according to the data bindings that you have defined.

#### Procedure

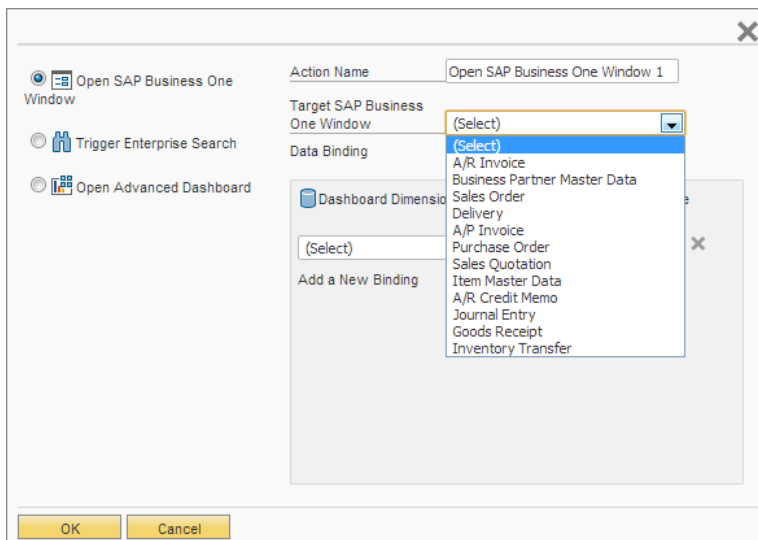

To add action type *Open SAP Business One Window*, follow the procedure below:

1. In the action section of a pervasive dashboard, choose (Add a New Action) beside *Actions To Be Triggered*.

- In the edit window, select the *Open SAP Business One Window* radio button.

- In the *Action Name* field, specify the action name.
- In the *Target SAP Business One Window* dropdown list, select the window that you want to open. You can link to only one window with one action.

- In the *Data Binding* section, select the dimension in the pervasive dashboard and link it to the field of the selected window. To add links to more fields, choose *Add a New Binding*.

In the Fiori-style cockpit or an advanced dashboard, when you right-click a measure of the pervasive dashboard, and choose this action, the value of the defined dimension in the action is transferred to its linked field. The specific window appears with the field value equal to the dimension value.

- To save the action, choose the *OK* button.

## Example

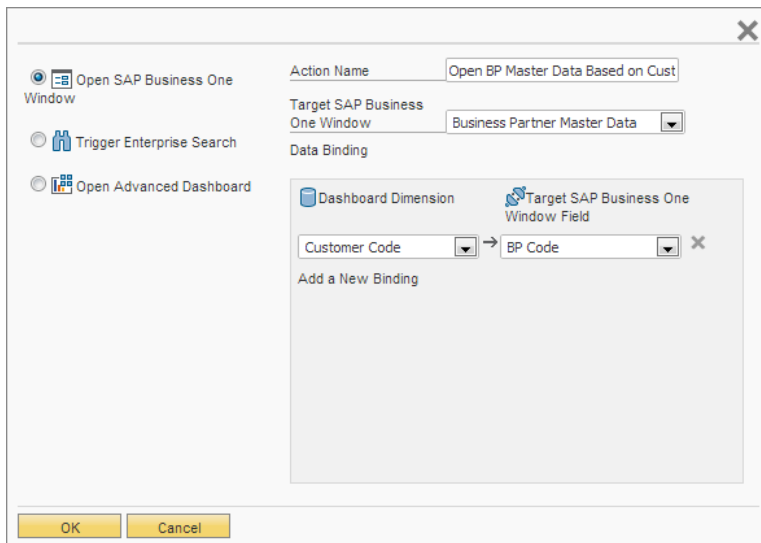

You have performed the following:

1. In the pervasive dashboard, you added measure *Total Sales Amount*, and dimension *Customer Code* to the pervasive dashboard.

2. In the edit window, you selected the *Open SAP Business One Window* radio button, and specified **Open BP Master Data Based on Customer** as its name.
3. In the *Target SAP Business One Window* dropdown list, you selected *Business Partner Master Data*.
4. In the *Dashboard Dimension* dropdown list, you selected *Customer Code*.

5. In the *Target SAP Business One Window Field* dropdown list, you selected *BP Code*.

6. In the edit window, you chose the *OK* button.

Follow the procedure below to use the action:

1. In the Fiori-style cockpit or an advanced dashboard, right-click the total sales amount of a customer whose code is *C40000*, and choose *Open BP Master Data Based on Customer*.

- The *Business Partner Master Data* window appears, with the *Code* field value as *C40000*.

### 3.1.3.2.3 Action: Trigger Enterprise Search

In the Fiori-style cockpit or an advanced dashboard, this type of action will appear when you right-click the data of pervasive dashboards. Choose this action to run an enterprise search with the dimension value as the search criterion.

#### Procedure

To add action type *Trigger Enterprise Search*, follow the procedure below:

- In the action section of a pervasive dashboard, choose (Add a New Action) beside *Actions To Be Triggered*.

- In the edit window, select the *Trigger Enterprise Search* radio button.

The screenshot shows a dialog box with a close button (X) in the top right corner. On the left, there are three radio buttons: 'Open SAP Business One Window' (unselected), 'Trigger Enterprise Search' (selected), and 'Open Advanced Dashboard' (unselected). To the right of the radio buttons is an 'Action Name' text field containing 'Trigger Enterprise Search 1'. Below the radio buttons is a 'Dashboard Dimension' section with a checkbox labeled 'Item Code' which is currently unchecked. At the bottom of the dialog are two buttons: 'OK' and 'Cancel'.

- In the *Action Name* field, specify the action name.
- In the *Dashboard Dimension* section, select the dimension whose value you want to use as the search criterion.

**i** Note

If you select two or more dimensions, the application will search for results that contain all the dimension values.

- To save the action, choose the *OK* button.

## Example

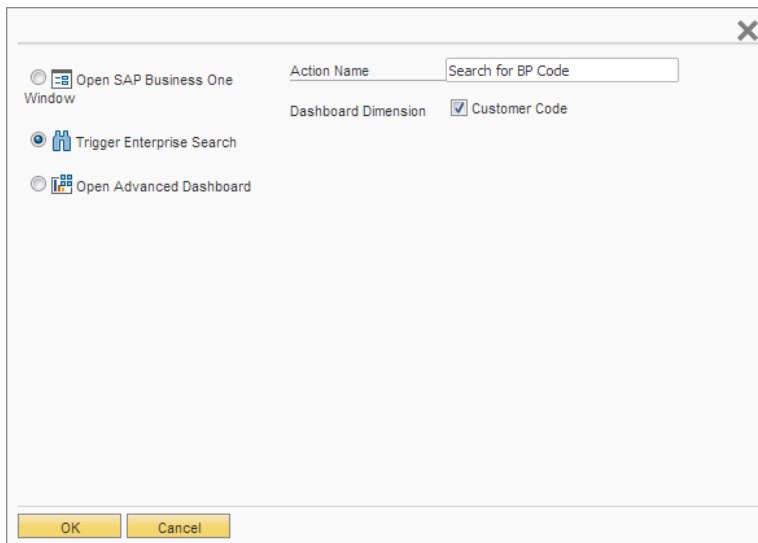

You have performed the following:

1. In the pervasive dashboard, you added measure *Total Sales Amount*, and dimension *Customer Code* to the pervasive dashboard.

2. In the edit window, you selected the *Trigger Enterprise Search* radio button, and specified **Search for BP Code** as its name.

3. In the *Dashboard Dimension* section, you selected dimension *Customer Code*.

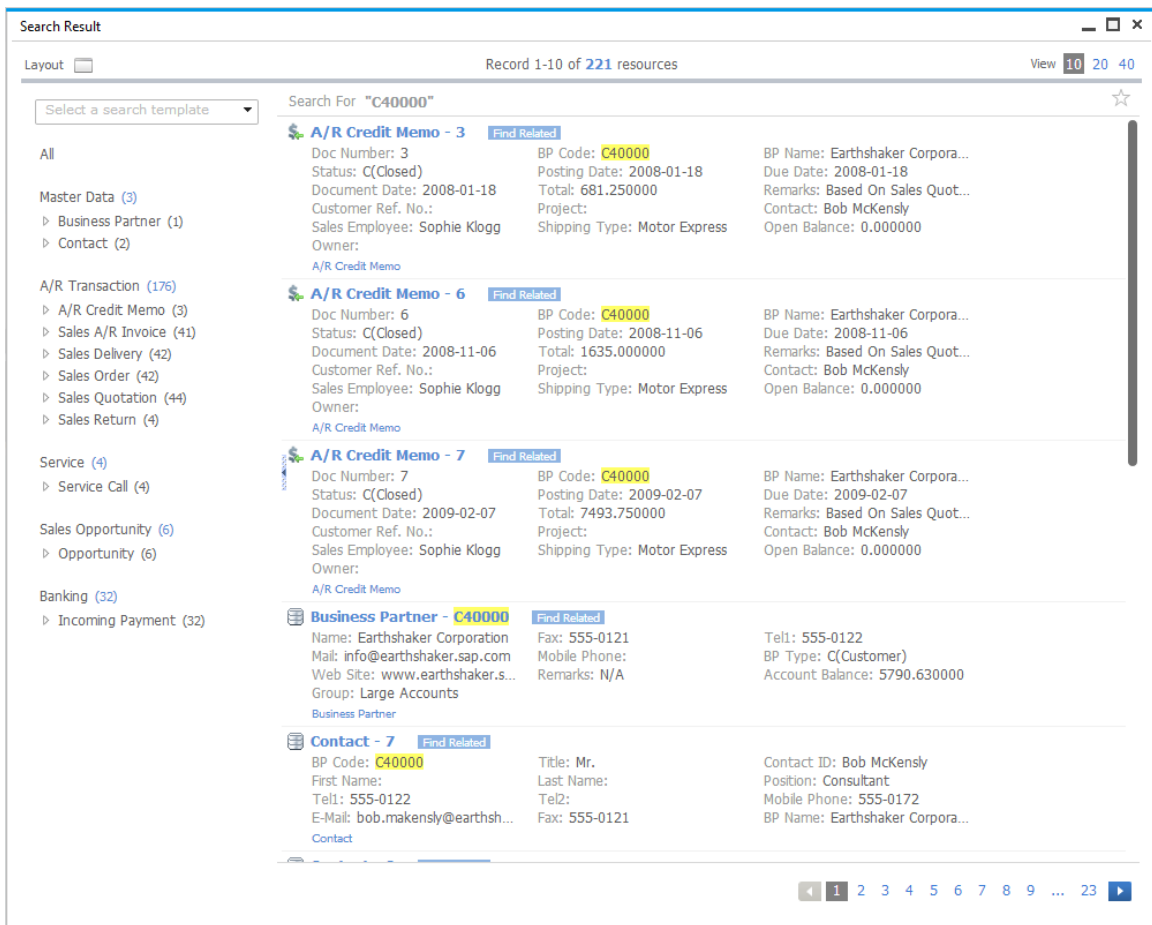

4. In the edit window, you chose the *OK* button.

Follow the procedure below to use the action:

1. In the Fiori-style cockpit or an advanced dashboard, right-click the total sales amount of a customer whose code is *C40000*, and choose *Search for BP Code*.

2. The *Search Result* window appears, with *C40000* as its search criterion.

### 3.1.3.2.4 Action: Open Advanced Dashboard

In the Fiori-style cockpit or an advanced dashboard, this type of action will appear when you right-click the data of pervasive dashboards. Choose this action to open the linked advanced dashboard with the dimension value as the filter.

#### **i** Note

Make sure you have authorizations for the advanced dashboard that you want to view. To set authorizations for advanced dashboards to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose *Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user to whom you want to grant the authorization, and in *Analytics* → *Content* → *Advanced Dashboard*, select *Full Authorization* for the advanced dashboards for which you want to grant authorization. Once you have authorizations for a specific advanced dashboard, you can view all the contents in it.

## Procedure

To add action type *Open Advanced Dashboard*, follow the procedure below:

1. In the action section of a pervasive dashboard, choose [+](#) (*Add a New Action*) beside *Actions To Be Triggered*.
2. In the edit window, select the *Open Advanced Dashboard* radio button.

The screenshot shows a configuration dialog box for the 'Open Advanced Dashboard' action. On the left, there are three radio buttons: 'Open SAP Business One Window', 'Trigger Enterprise Search', and 'Open Advanced Dashboard' (which is selected). The main area contains the following fields:

- Action Name:** A text field containing 'Open Advanced Dashboard 1'.
- Target Adv. Dashboard:** A dropdown menu currently showing '(Select)'.
- Data Binding:** A section with two sub-sections: 'Dashboard Dimension' and 'Target Adv. Dashboard Filter'. Each has a dropdown menu currently showing '(Select)'. An arrow points from the 'Dashboard Dimension' dropdown to the 'Target Adv. Dashboard Filter' dropdown. Below these is a button labeled 'Add a New Binding'.

At the bottom of the dialog are 'OK' and 'Cancel' buttons.

3. In the *Action Name* field, specify the action name.
4. In the *Target Adv. Dashboard* dropdown list, select the advanced dashboard that you want to open. You can link to only one advanced dashboard with one action.
5. In the *Data Binding* section, select the dimension in the pervasive dashboard and link it to the filter of the selected advanced dashboard. To add links to more filters, choose *Add a New Binding*.

For more information about filters in advanced dashboards, see [Setting Up Filters](#) and [Using Filters](#).

In the Fiori-style cockpit or an advanced dashboard, when you right-click a measure of the pervasive dashboard, and choose this action, the value of the defined dimension in the action is transferred to its linked filter. The advanced dashboard appears with the dimension value as its filtering value.

6. To save the action, choose the *OK* button.

## Example

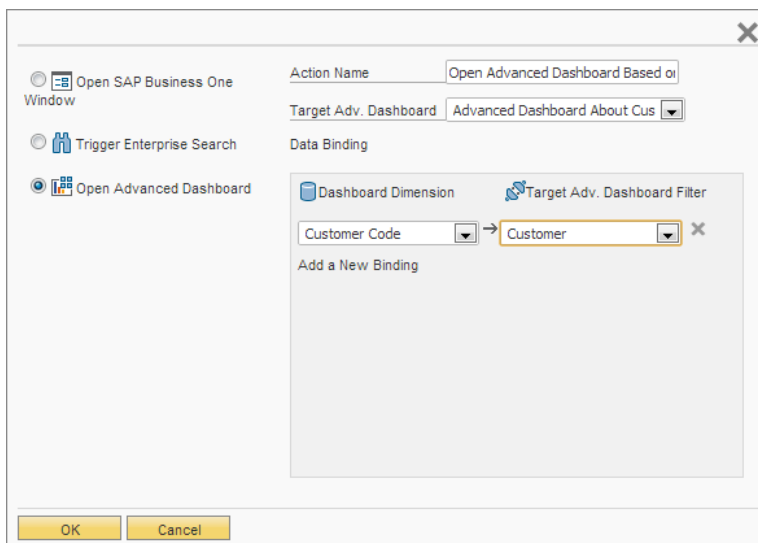

You have performed the following:

1. In the pervasive dashboard, you added measure *Total Sales Amount*, and dimension *Customer Code* to the pervasive dashboard.

2. In the edit window, you selected the *Open Advanced Dashboard* radio button, and specified **Open Advanced Dashboard Based on Customer** as its name.
3. In the *Target Adv. Dashboard* dropdown list, you selected *Advanced Dashboard About Customer*, an advanced dashboard that you have already created with a filter called *Customer*. The target dimension of the base widget in filter *Customer* is *BP Code*. For more information about setting up filters, see [Setting Up Filters](#).
4. In the *Dashboard Dimension* dropdown list, you selected *Customer Code*.

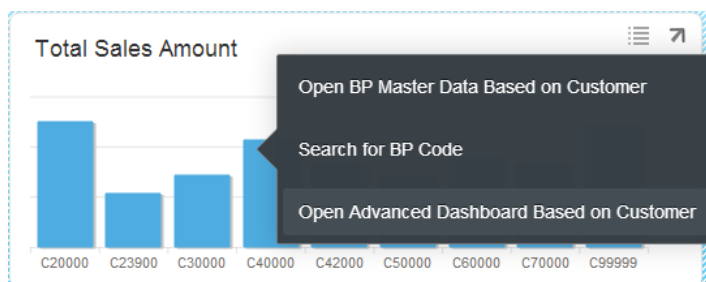

5. In the *Target Adv. Dashboard Filter* dropdown list, you selected *Customer*.

6. In the edit window, you chose the *OK* button.

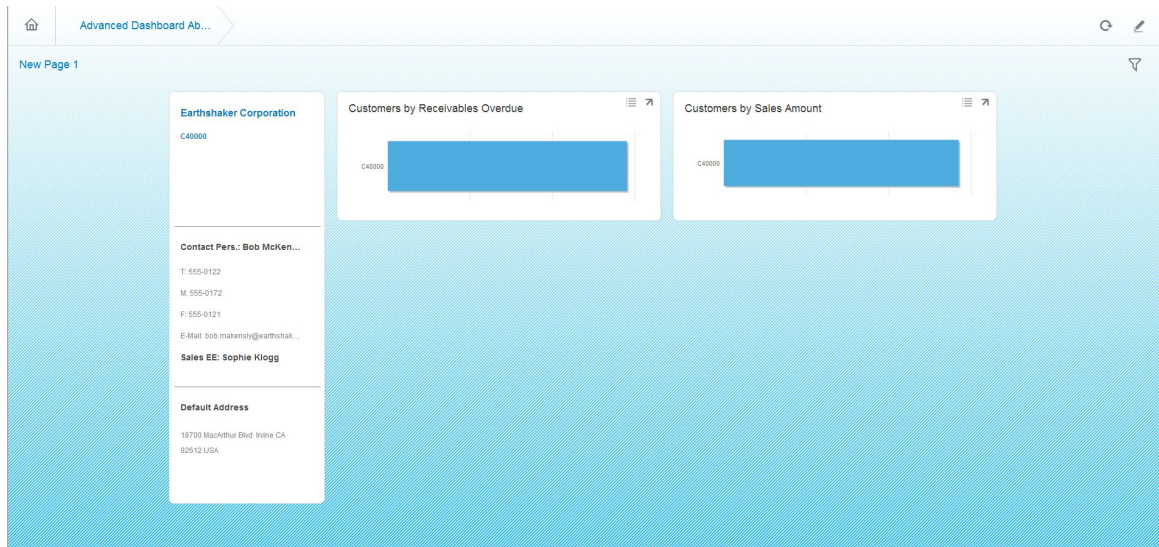

Follow the procedure below to use the action:

1. In the Fiori-style cockpit or an advanced dashboard, right-click the total sales amount of a customer whose code is *C40000*, and choose *Open Advanced Dashboard Based on Customer*.

2. The advanced dashboard *Advanced Dashboard About Customer* appears, displaying data filtered by the value *C40000*.

### 3.1.3.3 Using the Time Slider

#### **i** Note

You cannot use strategies if you are using the time slider function.

#### Prerequisite

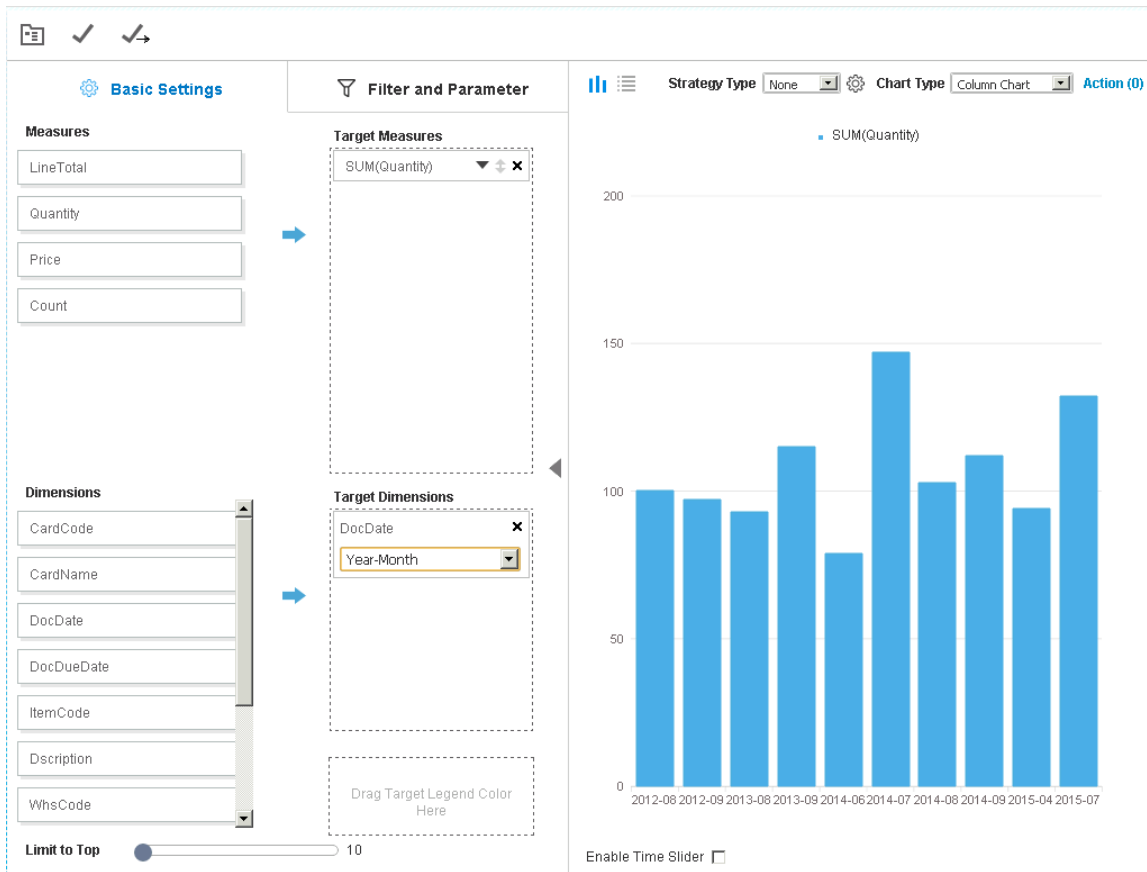

You have added only one dimension, the dimension is of date type, and the time unit is only one of the following:

- *Year-Quarter*
- *Year-Month*
- *Year-Week*
- *Date*

#### Procedure

1. In the *Select Base Data Source* window of the dashboard designer, select the query or view based on which you want to design a pervasive dashboard.

- On the *Basic Settings* tab, drag required measures and date-type dimensions to the target area. The dashboard in the screenshot displays sales quantities of each time period for the latest 10 months.

- To enable the slider for the dashboard in the advanced dashboard, select the *Enable Time Slider* checkbox. The time slider appears. You can drag the left or right bar of the slider to display the data you want.

## Result

In the advanced dashboard, you can drag the time slider to view data.

## 3.2 Viewing Pervasive Dashboards in the Cockpit

For more information about viewing dashboards in the cockpit, see [Working with Crystal Dashboards](#) in the online help documentation.

You can add to your cockpit all pervasive dashboards for which you have authorizations. To set authorizations for pervasive dashboards to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user to whom you want to grant the authorization, and in [Analytics](#) → [Content](#) → [Dashboard](#), select [Full Authorization](#) for the pervasive dashboards to which you want to grant authorization.

## 3.3 Viewing Pervasive Dashboards in the Fiori-Style Cockpit

For more information about viewing pervasive dashboards in the Fiori-style cockpit, look for the [How to Work with the Fiori-Style Cockpit](#) guide on [SAP Help Portal](#).

## 3.4 Viewing Linked Pervasive Dashboards in Sidebars

### Prerequisites

- On the [Display](#) tab of the [General Settings](#) window, you have selected the checkbox [Enable sidebar in windows to display recommendations and linked dashboards](#).
- You have authorizations for the pervasive dashboard that you want to view. To set authorizations for pervasive dashboards to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user to whom you want to grant the authorization, and in [Analytics](#) → [Content](#) → [Dashboard](#), select [Full Authorization](#) for the pervasive dashboards to which you want to grant authorization.

### Procedure

1. From the SAP Business One, version for SAP HANA [Main Menu](#), choose the required menu entry, and open the linked window.

The window appears with a sidebar. If there is no sidebar, in the SAP Business One, version for SAP HANA menu bar, choose [View](#) → [User-Defined Fields](#).

2. Choose  and select the [Analytics](#) tab to display the linked dashboard.

#### Note

If there is more than one dashboard linked to this window, you can choose the dashboard name or scroll your mouse wheel to switch dashboards.

Navigating to a different record in the window generates different information based on your links.

- In the displayed dashboard, to refresh the dashboard content, choose  (*Refresh*).

The screenshot displays the 'Business Partner Master Data' window and an 'Analytics' sidebar. The main window includes fields for Code (Manual, C42000, Customer), Name (Mashina Corporation), and various financial metrics like Account Balance (16,628.76), Deliveries (2,391.63), Orders (10,156.13), and Opportunities (10). The Analytics sidebar shows a bar chart titled 'Best selling items' with a 'Quantity' legend, displaying data for various item codes.

## 3.5 Viewing Recommendations in Sidebars

### Prerequisites

- On the *Display* tab of the *General Settings* window, you have selected the checkbox *Enable sidebar in windows to display recommendations and linked dashboards*.
- You have run the recommendation service successfully, by navigating to the URL: <https://<Server Address>:<Port>/PredictiveAnalysis> in a Web browser, logging on to the company you are working with, and define the refresh schedule.

#### Note

The URL supports the following Web browsers: Google Chrome, Microsoft Edge, Apple Safari, and Mozilla Firefox.

### Procedure

- From the SAP Business One, version for SAP HANA *Main Menu*, choose *Sales - A/R* → *Sales Quotation* or *Sales Order*.

The *Sales Quotation* or *Sales Order* window appears with a sidebar. If there is no sidebar, in the SAP Business One, version for SAP HANA menu bar, choose *View* → *User-Defined Fields*.

- Choose  and select the *Recommendation* tab to display the recommended items.

- When you input a customer in the document, the recommended items appear in the *Recommendations for This Customer* section. If this customer has no sales records or recommended items in the database, this section will display the items that are bought most frequently company wide. You can choose the *Add* button for a specific item to add it to the sales document.
- When you input an item in the document or move your mouse to an item line, the items that are most related to this customer and this item appear in the *Customers Who Bought This Item Also Bought* section. You can choose the *Add* button for a specific item to add it to the sales document.

### **i** Note

Every time you want to view the latest recommendation data in your company database, you must go to the URL in the *Prerequisites* part to choose the *Refresh Now* button.

The screenshot displays two SAP windows. The 'Sales Order' window on the left shows customer details for C20000 (Norm Thompson) and a sales order line for item P10003 (PC Set 1) with a quantity of 1,000. The 'Sales Recommendation' window on the right is divided into two sections:

- Recommendations for This Customer:** Lists items P10004 (1880.00\$), A00002 (200.00\$), A00001 (400.00\$), P10001 (1440.00\$), and A00003 (300.00\$), each with an 'Add' button.
- Customers Who Bought This Item Also Bought:** Lists items P10004 (1880.00\$), S10000 (1840.00\$), P10001 (1440.00\$), and P10002 (1380.00\$), each with an 'Add' button.

## 3.6 Managing Pervasive Dashboards in the Pervasive Analytics Designer

For more information about managing crystal dashboards, for example, importing and exporting dashboard packages, activating or deactivating a dashboard, see *Working with Crystal Dashboards* in the online help documentation.

---

## Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the [Working with App Framework for SAP Business One, version for SAP HANA](#) guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To set authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user for whom you want to set authorizations, and under [Analytics](#), in [Pervasive Analytics Designer](#), select [Full Authorization](#).

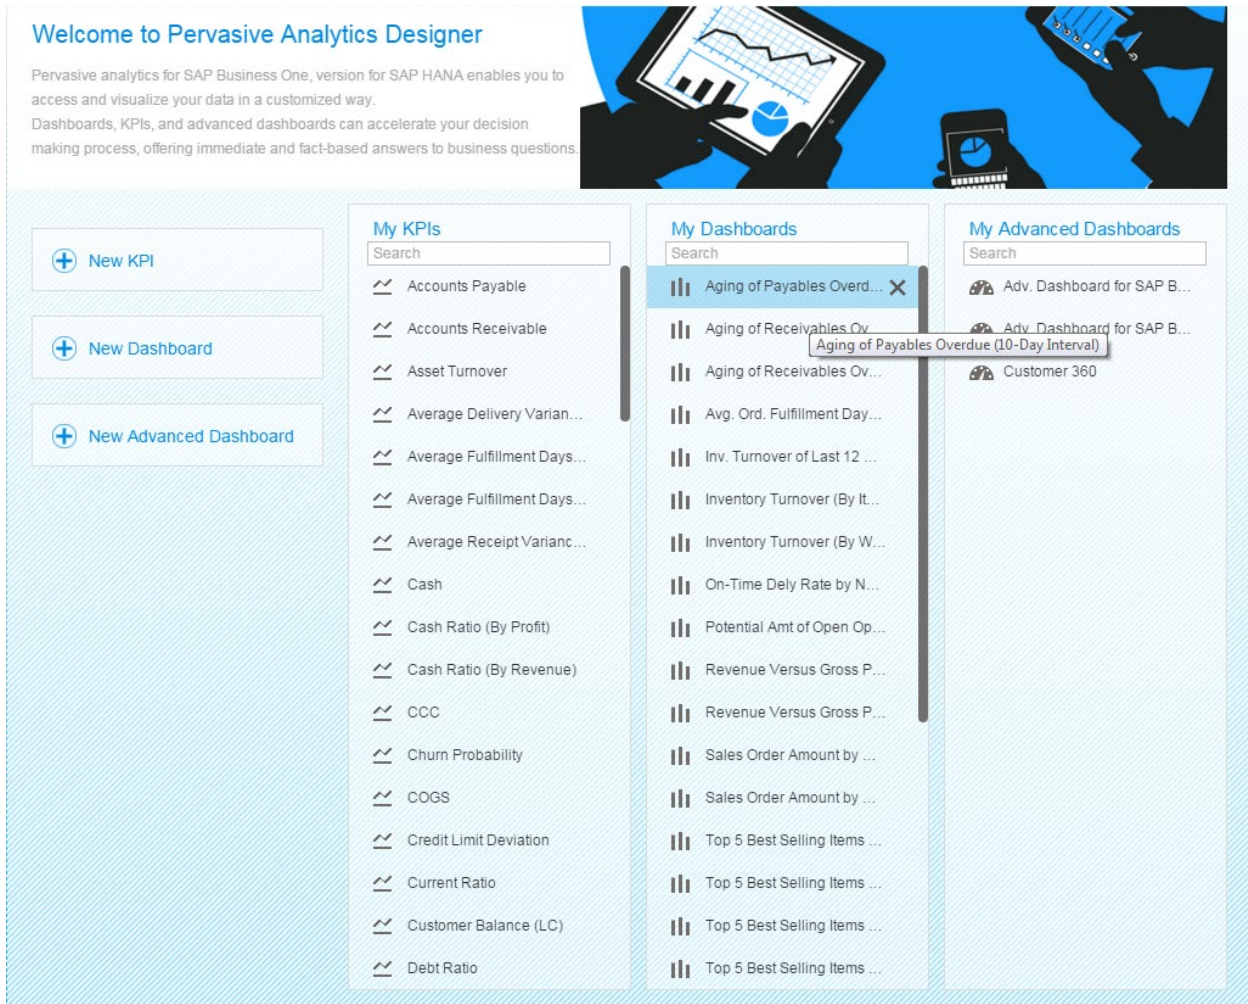

## Procedure

1. In the SAP Business One, version for SAP HANA toolbar, choose  ([Pervasive Analytics](#)). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose [Tools](#) → [Pervasive Analytics](#). The [Pervasive Analytics](#) window appears.

### Note

Only users with authorizations for the pervasive analytics designer can access the window.

2. In the *My Dashboards* section, you can find all pervasive dashboards, for which you can perform the following:
  - o Select each pervasive dashboard to view its contents.
  - o To delete a pervasive dashboard, hover your mouse over the relevant dashboard, choose the  icon, and choose the *Yes* button in the system message.

## 3.7 Predefined Pervasive Dashboards

SAP provides the following predefined pervasive dashboards.

### Note

To see a specific query, in the menu bar, choose *Tools* → *Queries* → *Query Manager*. For more information about the query manager, see *Query Manager* in the online help documentation.

Pervasive Dashboard	Description	Data Source
<a href="#">Aging of Payables Overdue (10-Day Interval)</a>	Vendor liabilities aging	User-defined query <a href="#">Aging of Payables Overdue (10-Day Interval)</a>
<a href="#">Aging of Receivables Overdue (10-Day Interval)</a>	Customer receivables aging	User-defined query <a href="#">Aging of Receivables Overdue (10-Day Interval)</a>
<a href="#">Aging of Receivables Overdue (30-Day Interval)</a>	Customer receivables aging	User-defined query <a href="#">Aging or Receivables Overdue (30-Day Interval)</a>
<a href="#">Avg. Ord. Fulfillment Days by Cust. (Last 6 Mo.)</a>	<p>The total of the following: Average number of days it takes to deliver products since the sales order is created for each business partner.</p> <p>This dashboard covers sales orders within this and the last five months according to their document dates. Fulfillment days per sales order = posting date of delivery - posting date of sales order</p>	User-defined query <a href="#">Monthly Average Fulfillment Days of Sales Orders by Customers</a>
<a href="#">Best-Selling Items by Sales Amount (with Tax)</a>	<p>Items ranked by sales amount based on invoices.</p> <p>In the SAP Business One Sales app, this dashboard appears on the <i>Dashboard</i> tab of customers by default, and displays the items ranked by sales amount based on the invoices of the specific customer.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">Sales Invoice</a>
<a href="#">Inv. Turnover of Last 12 Months (6-Month Comp.)</a>	Inventory turnover	User-defined query <a href="#">Inventory Turnover</a>
<a href="#">Inventory Turnover (By Item Group)</a>	Inventory turnover statistics by item group	User-defined query <a href="#">Inventory Turnover (By Item Group)</a>
<a href="#">Inventory Turnover (By Warehouse)</a>	Inventory turnover statistics by warehouse	User-defined query <a href="#">Inventory Turnover (By Warehouse)</a>

Pervasive Dashboard	Description	Data Source
<a href="#">Monthly Closed Tickets</a>	<p>The number of service tickets that you have closed by month. The data is sourced from the end time of your closed service tickets. If the end time of a service ticket is null, the service ticket will not be included.</p> <p>In the SAP Business One Service app, this KPI appears in the KPI screen by default. You can tap the tile to view the chart in full screen.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">Monthly Closed Tickets</a>
<a href="#">My Best-Selling Items by Sales Amount (with Tax)</a>	<p>Items ranked by sales amount based on the invoices of the currently logged-on sales employee.</p> <p>In the SAP Business One Sales app, this dashboard appears in the KPI screen by default.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">Sales Invoice</a>
<a href="#">My Sales Amount (with Tax)</a>	<p>The total sales order amount of the currently logged-on sales employee displayed by months, quarters, or years.</p> <p>In the SAP Business One Sales app, this dashboard appears by default when you tap the <a href="#">My Sales Amount (with Tax) for Current Month</a> KPI in the KPI screen.</p> <p>For more information about opening pervasive dashboards from KPIs in the SAP Business One mobile apps, see <a href="#">Action: Open Dashboard (For the SAP Business One Sales App)</a>.</p>	User-defined query <a href="#">Sales Order</a>
<a href="#">My Top 5 Customers by Sales Amount (with Tax)</a>	<p>Customers ranked by sales amount based on the invoices of the currently logged-on sales employee.</p> <p>In the SAP Business One Sales app, this dashboard appears in the KPI screen by default.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">Sales Invoice</a>
<a href="#">My Top 5 Fixed Items</a>	<p>The top five items that you have fixed. The data is sourced from your closed service tickets.</p> <p>In the SAP Business One Service app, this KPI appears in the KPI screen by default. You can tap the tile to view the chart in full screen.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <a href="#">My Top 5 Fixed Items</a>
<a href="#">My Top 5 Visited Customers</a>	<p>The top five customers that you have visited. The data is sourced from your closed service tickets.</p>	User-defined query <a href="#">My Top 5 Visited Customers</a>

Pervasive Dashboard	Description	Data Source
	<p>In the SAP Business One Service app, this KPI appears in the KPI screen by default. You can tap the tile to view the chart in full screen.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	
<i>On-Time Delivery Rate by No. by Cust. (Last 6 Mo.)</i>	<p>The total of the following:</p> <p>The result of the number of on-time delivered sales orders divided by the number of all delivered sales orders to each business partner.</p> <p>This dashboard covers sales orders within this and the last five months according to their document dates. The deliveries whose posting dates are earlier than or equal to the posting dates of sales orders are considered as on-time deliveries.</p>	User-defined query <i>Monthly On-Time Delivery Rate by Number of Orders by Customers</i>
<i>Potential Amount of My Open Opportunities by Stage</i>	<p>Potential amount of all open opportunities of the currently logged-on sales employee displayed by stages.</p> <p>In the SAP Business One Sales app, this dashboard appears by default when you tap the <i>Potential Amount of My Open Opportunities</i> KPI in the KPI screen.</p> <p>For more information about opening pervasive dashboards from KPIs in the SAP Business One mobile apps, see <a href="#">Action: Open Dashboard (For the SAP Business One Sales App)</a>.</p>	User-defined query <i>Opportunity</i>
<i>Revenue Versus Gross Profit for Last 6 Months</i>	Comparison of revenue and gross profit	User-defined query <i>Revenue Versus Gross Profit for Last 6 Months</i>
<i>Revenue Versus Gross Profit for Last 6 Years</i>	Comparison of net sales amount and gross profit in this and the last five years	Calculation view <i>Profitability Analysis</i>
<i>Sales Amount (with Tax) by Month</i>	<p>The total sales order amount displayed by months.</p> <p>In the SAP Business One Sales app, this dashboard appears on the <i>Dashboard</i> tab of customers by default and displays the total sales order amount of the specific customer by months, quarters, or years.</p> <p>For more information about customizing the advanced dashboard to be displayed in the SAP Business One mobile apps, see <a href="#">Predefined Advanced Dashboards</a>.</p>	User-defined query <i>Sales Order</i>
<i>Top 5 Best-Selling Items by Sales Amount</i>	Items ranked by sales amount based on invoices	User-defined query <i>Best Sellers by Sales Amount</i>

Pervasive Dashboard	Description	Data Source
<i>Top 5 Best-Selling Items by Sales Amount of This Year</i>	Items ranked by sales amount based on invoices in this year	Calculation view <i>Profitability Analysis</i>
<i>Top 5 Customers by Receivables Overdue</i>	Customers ranked by receivables overdue	User-defined query <i>Customers by Receivables Overdue</i>
<i>Top 5 Customers by Sales Amount</i>	Customers ranked by sales amount based on invoices	User-defined query <i>Customers by Sales Amount</i>
<i>Top 5 Item Groups by Inventory Value</i>	Item groups ranked by item inventory value in the groups	User-defined query <i>Item Groups by Inventory Value</i>
<i>Top 5 Purchased Items by Purchase Amount</i>	Items ranked by purchase amount based on invoices	User-defined query <i>Purchased Items By Purchase Amount</i>
<i>Top 5 Sales Employees by Sales Amount</i>	Sales employees ranked by sales amount based on invoices	Calculation view <i>Profitability Analysis</i>
<i>Top 5 Vendors by Payables Overdue</i>	Vendors ranked by payables overdue	User-defined query <i>Vendors by Payables Overdue</i>

## 4 Working with Advanced Dashboards

An advanced dashboard can contain the following widgets:

- Pervasive dashboard
- Key performance indicator (KPI)
- Count
- Business Partner Info

The major functions include, but are not limited to, the following:

- You can view an advanced dashboard in pages.
- You can add filters to specific widgets to see only the data related to what interests you.
- You can use actions of the widgets in the advanced dashboard.

### 4.1 Designing Advanced Dashboards Using the Pervasive Analytics Designer

#### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the [Working with App Framework for SAP Business One, version for SAP HANA](#) guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To grant authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user for whom you want to set authorizations, and under [Analytics](#), in [Pervasive Analytics Designer](#), select [Full Authorization](#).

#### Procedure

1. In the SAP Business One, version for SAP HANA toolbar, choose  ([Pervasive Analytics](#)). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose [Tools](#) → [Pervasive Analytics](#). The [Pervasive Analytics](#) window appears.

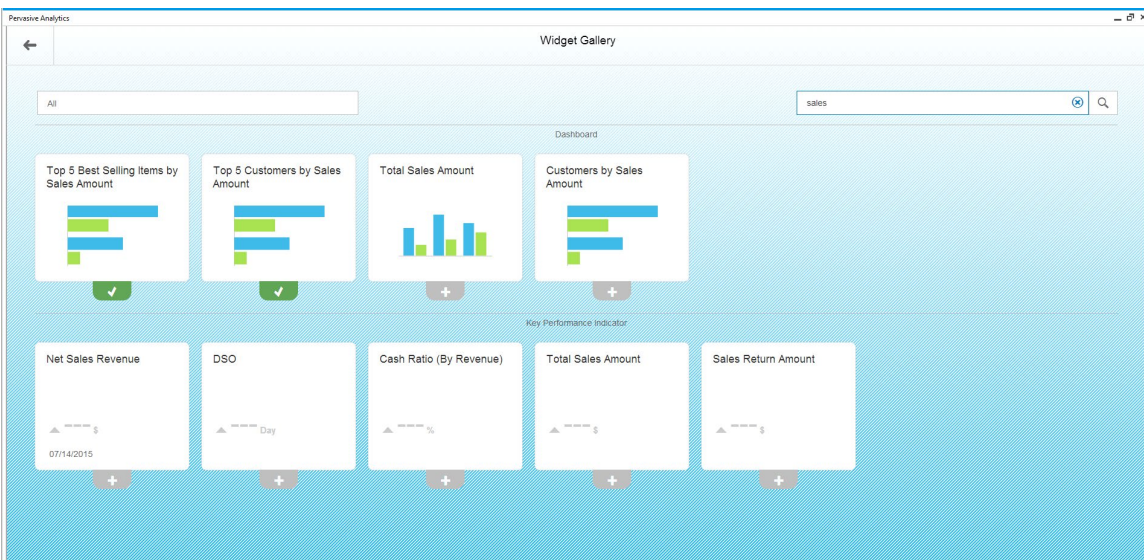

#### Note

Only users with authorizations for the pervasive analytics designer can access this window.

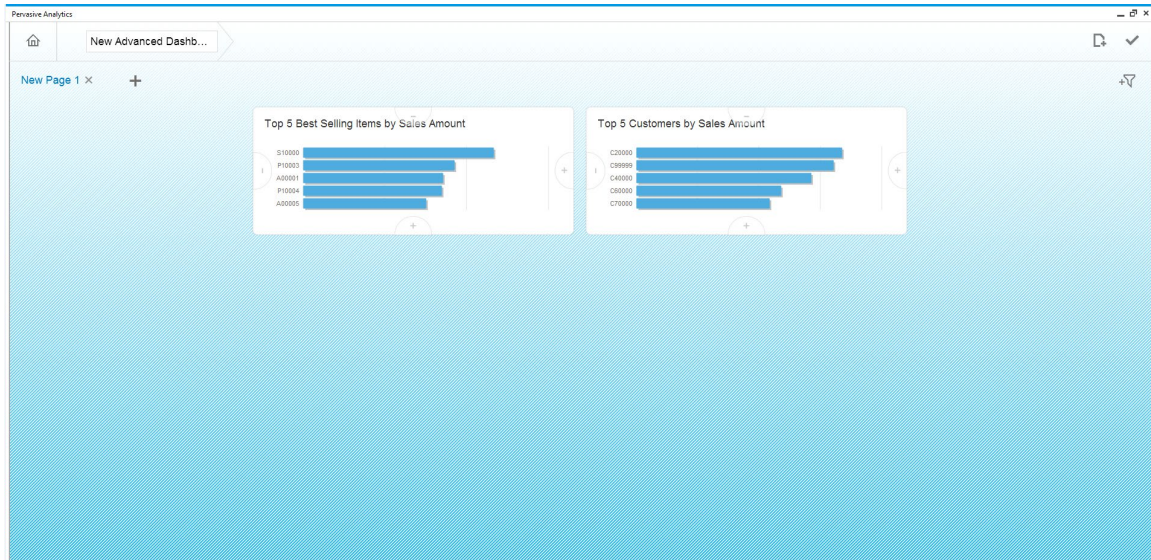

- On the left side of the *Pervasive Analytics* window, choose *New Advanced Dashboard*.  
A blank advanced dashboard appears in edit mode.

- To add a widget, in the upper right corner of the advanced dashboard, choose  (*Add Widgets*).  
The widget gallery appears.
- In the widget gallery, select the widget that you want to add to the current page of your advanced dashboard.  
To find a widget in a specific category, in the upper left corner of the widget gallery, select the category that you want to explore.  
To find a specific widget, in the upper right corner of the widget gallery, enter the widget name, or part of the name, to search for the widget.

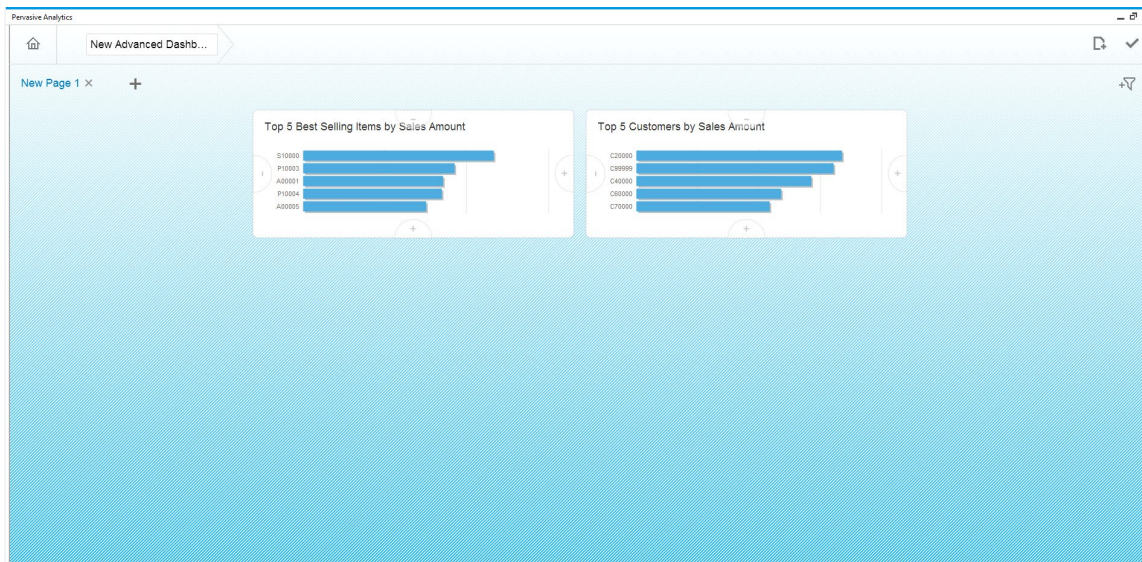

5. After you select the widgets, in the upper left corner of the widget gallery, choose  (*Go Back*). The widgets appear in the current page of the advanced dashboard in edit mode.

6. To specify new names for the current page and advanced dashboard, click the titles of the page and advanced dashboard, and enter the names.
7. [Optional] To add a filter for the advanced dashboard, in the upper right corner of the current page, choose  (*Filter Settings*). For more information, see [Setting Up Filters](#).
8. To save the advanced dashboard, in the upper right corner of the advanced dashboard, choose  (*Save*).

## 4.1.1 Edit Mode

In the pervasive analytics designer, when you design a new advanced dashboard or open an existing advanced dashboard, the dashboard appears in edit mode.

In the edit mode of an advanced dashboard, you can perform the following:

- To specify a new name for the current page or advanced dashboard, click the title of the page or advanced dashboard, and enter the name.
- To add a new page, to the right of the current page name, choose **+** (*Add New Page*).
- To delete an existing page, beside the name of the page that you want to delete, choose **X** (*Remove Page*).
- To add a widget, in the upper right corner of the advanced dashboard, choose **+** (*Add Widgets*).
- To change the place of a widget, select the widget that you want to move, and drag it to the place that you prefer.

- To delete a widget, select the widget that you want to delete, and drag it to the red area in the lower right corner.

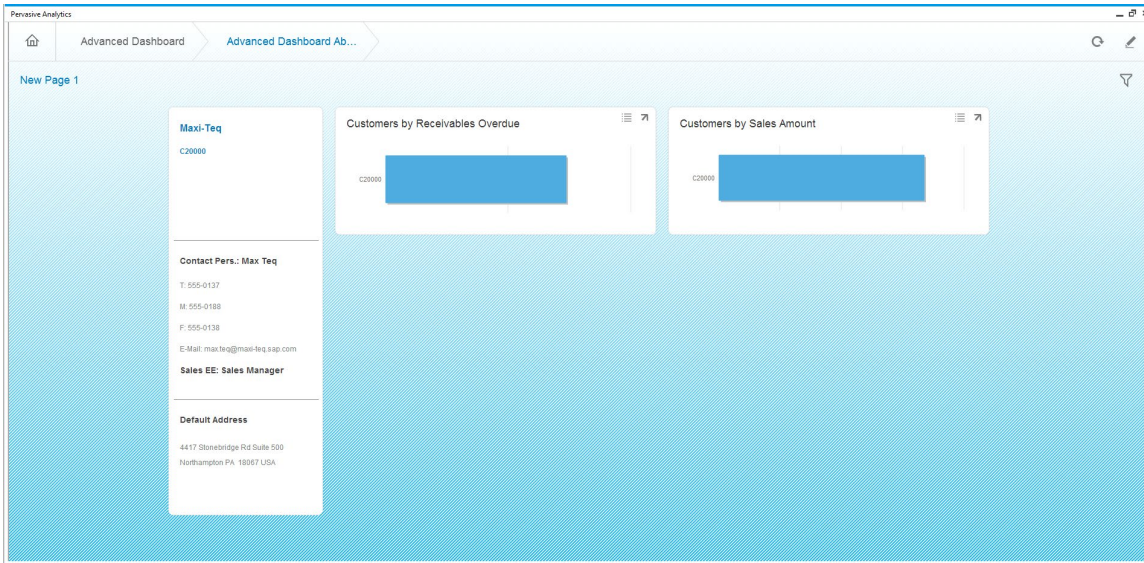

- To add a filter, in the upper right corner of the current page, choose  (*Filter Settings*). For more information, see [Setting Up Filters](#).
- To save the advanced dashboard, in the upper right corner of the advanced dashboard, choose  (*Save*).
- For a pervasive dashboard, to change its size, around the pervasive dashboard, choose the minus or plus sign.

## 4.1.2 View Mode

The view mode appears in the following situations:

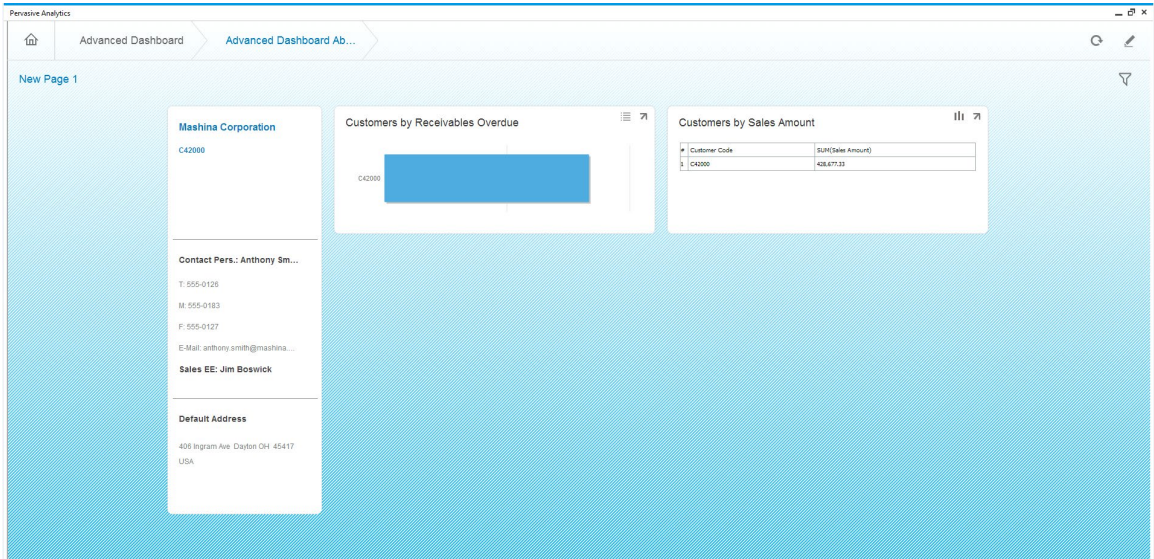

- In the edit mode of the advanced dashboard, in the upper right corner of the advanced dashboard, you choose ✓ (Save).
- In the view mode of the advanced dashboard, or in the Fiori-style cockpit, you open an advanced dashboard from the action of a pervasive dashboard or KPI.

In the view mode of an advanced dashboard, you can perform the following:

- To refresh the data, in the upper right corner of the advanced dashboard, choose ↻ (Refresh).
- To edit the advanced dashboard, in the upper right corner, choose ✎ (Edit).
- To use the filters, in the upper right corner of the current page, choose ⚙ (Filters). For more information, see [Using Filters](#).
- To go back from the current advanced dashboard to the previous one, in the upper left corner of the advanced dashboard, choose the name of the previous dashboard.
- To perform actions defined for a pervasive dashboard, right-click the data for a dimension, and choose the action.
- To perform an action defined for a KPI, click anywhere on the KPI.
- To perform an action for a count widget, choose the number of the widget.

- For a pervasive dashboard, you can perform the following:
  - To toggle between the dashboard view and the query result view, in the upper right corner of the pervasive dashboard, choose  (*Switch to Chart*) or  (*Switch to Table*).

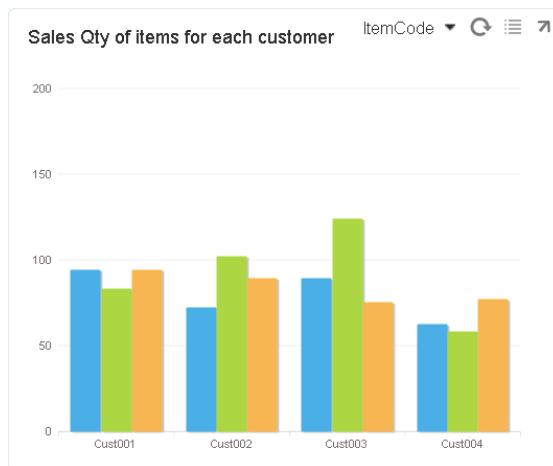

- To refresh the pervasive dashboard, in the upper right corner of the pervasive dashboard, choose  (*Refresh*).

- For pervasive dashboards for which you have defined legend color, to view data based on different legend color values, in the upper right corner of the pervasive dashboard, choose . The pervasive dashboard in the screenshots displays data with the two legend color values selected when the dashboard was designed. When you select another legend color value, the pervasive dashboard displays data based on the three legend color values. For more information about legend color, see [Using Legend Color](#).

## **i** Note

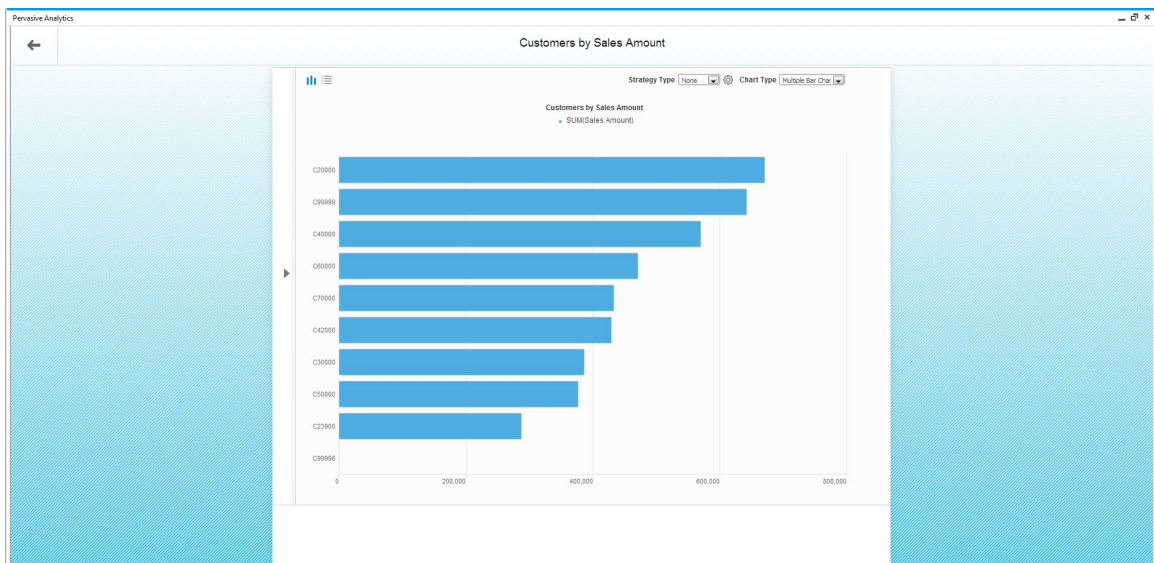

Changing the legend color value only changes the display of this pervasive dashboard in the advanced dashboard. This does not change the pervasive dashboard.

- o For pervasive dashboards for which you have enabled the time slider, to change the data view in different time period, drag the left or right bar of the slider.

- o To enlarge the pervasive dashboard in the dashboard designer, in the upper right corner of the pervasive dashboard, choose  (*Enlarge the Dashboard*). In its enlarged view, you can change the settings of the pervasive dashboard for a new result, but you cannot save the changed pervasive dashboard.

- o To go back to the advanced dashboard, in the upper left corner of the dashboard designer, choose  (*Go Back*).

## 4.1.3 Setting Up Filters

You can set up filters for specific widgets in the whole advanced dashboard.

## Procedure

In the edit mode of an advanced dashboard, to set up filters, follow the procedure below:

1. In the upper right corner of the current page, choose  (*Filter Settings*).

The *Filter Settings* page appears.

Name	Target Dimension	Base ?
 Business Partner Info	BP Code	<input checked="" type="radio"/>
 Customers by Receiva...	Customer Code	<input type="radio"/>
 Customers by Sales A...	Customer Code	<input type="radio"/>

2. In the left pane, choose *Add Filter*.

Filter settings appear in the right pane.

The *Target Widgets* section lists all the widgets except the count widget in the advanced dashboard, and you can view them by pages.

3. In the *Filter Type* section, select *String* or *Date* as your filter type.
4. In the *Filter Type* section, if you select the *Single Value Selection* checkbox, when you use this filter, you can select only one filtering value. If you deselect the *Single Value Selection* checkbox, when you use this filter, you can select multiple filtering values.

### Note

For a filter that includes a *Business Partner Info* widget, you must select the *Single Value Selection* checkbox.

- 
5. To include specific widgets in your filtering scope, in the *Target Dimension* column of those widgets, select the dimension that you want to set as the filter.

For widgets whose base data source is a query, the *Target Dimension* dropdown list contains all the non-numerical columns of the query.

For widgets whose base data source is a view, the *Target Dimension* dropdown list contains all the attributes of the view.

 Note

Filter settings does not support composite KPIs. The *Target Dimension* and *Base* columns for composite KPIs are disabled.

6. To set a base widget, proceed as follows:
  1. In the *Target Widgets* section, locate the widget from which you want to retrieve the filtering values.
  2. In the *Target Dimension* column of the target widget, select the dimension whose values you want to retrieve as the filtering values, and select its *Base* column.

 Note

If you define two or more target widgets, those widgets will be refreshed to display the filtered data when you use the filter, and the filtering values will be retrieved from the target dimension of the base widget.

 Note

All widgets except KPI can be used as base widgets.

7. To save the filter, in the upper right corner of the filter settings, choose  (*Save*).

## 4.1.4 Using Filters

You can use filters for target widgets that you have defined in the filters.

## Procedure

In the view mode of an advanced dashboard, to use filters, follow the procedure below:

1. In the upper right corner of the current page, choose  (*Filters*).

The *Filter By* window appears.

2. Select the filter that you want to use.

The filtering values are retrieved from the target dimension of the base widget.

3. Select the filtering values that you want to use for the target widgets.

To clear the values that you just selected, in the upper right corner, choose  (*Clear All Filters*).

 **Note**

You can set the selection method for the filtering values, single selection or multiple selections, by setting the *Single Value Selection* checkbox in the filter.

4. In the upper left corner, choose .

The number of filtering values appears beside the filter you just used.

 **Note**

To use two or more filters, select them, and select the filtering values.

To clear all filters, in the upper right corner, choose  (*Clear All Filters*).

5. In the *Filter By* window, choose the *OK* button.

The data of the target widgets are filtered by the values you selected.

## 4.2 Viewing and Managing Advanced Dashboards in the Pervasive Analytics Designer

### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the *Working with App Framework for SAP Business One, version for SAP HANA* guide on [SAP Help Portal](#).
- You have authorizations for the pervasive analytics designer. To grant authorizations for the pervasive analytics designer to users, from the SAP Business One, version for SAP HANA *Main Menu*, choose

*Administration* → *System Initialization* → *Authorizations* → *General Authorizations*. In the *Authorizations* window, select the user for whom you want to set authorizations, and under *Analytics*, in *Pervasive Analytics Designer*, select *Full Authorization*.

## Procedure

- In the SAP Business One, version for SAP HANA toolbar, choose  (*Pervasive Analytics*). Alternatively, in the SAP Business One, version for SAP HANA menu bar, choose *Tools* → *Pervasive Analytics*. The *Pervasive Analytics* window appears.

### Note

Only users with authorizations for the pervasive analytics designer can access the window.

- In the *My Advanced Dashboards* section, you can find all the advanced dashboards, for which you can perform the following:
  - Select each advanced dashboard to view its contents.
  - To delete an advanced dashboard, hover your mouse over the relevant dashboard, choose the  icon, and choose the *Yes* button in the system message.

**Welcome to Pervasive Analytics Designer**

Pervasive analytics for SAP Business One, version for SAP HANA enables you to access and visualize your data in a customized way. Dashboards, KPIs, and advanced dashboards can accelerate your decision making process, offering immediate and fact-based answers to business questions.

**My KPIs**

- Accounts Payable
- Accounts Receivable
- Asset Turnover

Customer 360

## 4.3 Viewing Advanced Dashboard

You can view advanced dashboard without the pervasive analytics designer, either with the action from [KPIs](#) and [pervasive dashboards](#), or with the [Customer 360 feature](#).

### Prerequisites

- You have installed the app framework for SAP Business One, version for SAP HANA. For more information about installing the app framework, look for the [Working with App Framework for SAP Business One, version for SAP HANA](#) guide on [SAP Help Portal](#).
- You have authorizations for the advanced dashboard that you want to view. To set authorizations for advanced dashboards to users, from the SAP Business One, version for SAP HANA [Main Menu](#), choose [Administration](#) → [System Initialization](#) → [Authorizations](#) → [General Authorizations](#). In the [Authorizations](#) window, select the user to whom you want to grant the authorization, and in [Analytics](#) → [Content](#) → [Advanced Dashboard](#), select [Full Authorization](#) for the advanced dashboards for which you want to grant authorization.

#### Note

Once you have authorizations for a specific advanced dashboard, you can view all the contents in it.

## 4.4 Predefined Advanced Dashboards

SAP provides the following predefined advanced pervasive dashboards.

For more information about the KPIs and pervasive dashboards contained in the predefined advanced dashboards, see [Predefined KPIs](#) and [Predefined Pervasive Dashboards](#).

### Adv. Dashboard for SAP Business One Sales App - Curr. Sales EE

In the SAP Business One Sales app, this advanced dashboard appears in the KPI screen by default. For more information about the mobile apps, look for the guides [Working with SAP Business One Sales Mobile App](#) or [Working with SAP Business One Service Mobile App](#) on [SAP Help Portal](#).

This advanced dashboard contains the following KPIs and pervasive dashboards. For more information about the KPIs and pervasive dashboards, see [Predefined KPIs](#) and [Predefined Pervasive Dashboards](#).

- [KPI] [Potential Amount of My Open Opportunities](#): when you tap this KPI in the SAP Business One Sales app, the pervasive dashboard [Potential Amount of My Open Opportunities by Stage](#) appears.
- [KPI] [My Sales Amount \(with Tax\) for Current Month](#): when you tap this KPI in the SAP Business One Sales app, the pervasive dashboard [My Sales Amount \(with Tax\)](#) appears.
- [Pervasive dashboard] [My Top 5 Customers by Sales Amount \(with Tax\)](#)
- [Pervasive dashboard] [My Best-Selling Items by Sales Amount \(with Tax\)](#)

You cannot delete the predefined advanced dashboard, but you can modify it. It is the first page of this advanced dashboard that appears in the KPI screen in the SAP Business One Sales app.

---

## Adv. Dashboard for SAP Business One Sales App - Customer

In the SAP Business One Sales app, this dashboard appears on the *Dashboard* tab of customers by default. For more information about the mobile apps, look for the guides *Working with SAP Business One Sales Mobile App* or *Working with SAP Business One Service Mobile App* on [SAP Help Portal](#).

This advanced dashboard contains the following KPIs and pervasive dashboards. For more information about the KPIs and pervasive dashboards, see [Predefined KPIs](#) and [Predefined Pervasive Dashboards](#).

- [Pervasive dashboard] *Sales Amount (with Tax) by Month*
- [KPI] *Open Amount of Deliveries for Customer*
- [KPI] *Customer Receivables*
- [Pervasive dashboard] *Best-Selling Items by Sales Amount (with Tax)*

You cannot delete the predefined advanced dashboard, but you can modify it. It is the first page of this advanced dashboard that appears on the *Dashboard* tab of customers.

When displayed on the *Dashboard* tab of customers in the SAP Business One Sales app, the data is based on the specific customer you are exploring.

## Note

To make sure the first page of the *Adv. Dashboard for SAP Business One Sales App - Customer* advanced dashboard displays data based on the specific customer in the SAP Business One Sales app, in the data source of the KPIs and dashboards contained in the first page, there **must** be a dimension called **CardCode**, and the name is case sensitive. Otherwise, the data will not be based on the specific customer you are exploring.

The following is an example of a KPI data source that contains a dimension called **CardCode**:

The screenshot shows the Pervasive Analytics KPI Designer interface. On the left, a list of data sources is displayed, with 'CardCode' highlighted in a red box. The main area shows the 'Value Settings' tab, which includes fields for 'KPI Name', 'KPI Description', 'Set KPI Value', 'Set KPI Goal', and 'Set KPI Trend'. The 'CardCode' dimension is visible in the 'Set KPI Value' section.

The following is an example of a pervasive dashboard data source that contains a dimension called **CardCode**:

## Adv. Dashboard for SAP Business One Service App

In the SAP Business One Service app, this advanced dashboard appears in the KPI screen by default. For more information about the mobile apps, look for the guides [Working with SAP Business One Sales Mobile App](#) or [Working with SAP Business One Service Mobile App](#) on [SAP Help Portal](#).

This advanced dashboard contains the following KPIs and pervasive dashboards. For more information about the KPIs and pervasive dashboards, see [Predefined KPIs](#) and [Predefined Pervasive Dashboards](#).

- [KPI] [Monthly Closed Tickets](#)
- [KPI] [Yearly In-Service Rate](#)
- [Pervasive dashboard] [My Top 5 Fixed Items](#)
- [Pervasive dashboard] [My Top 5 Visited Customers](#)
- [Pervasive dashboard] [Monthly Closed Tickets](#)

---

You cannot delete the predefined advanced dashboard, but you can modify it. It is the first page of this advanced dashboard that appears in the KPI screen in the SAP Business One Service app.

## Customer 360

For more information about working with Customer 360, see [Working with Customer 360](#).

This advanced dashboard contains the following KPIs and pervasive dashboards. For more information about the KPIs and pervasive dashboards, see [Predefined KPIs](#) and [Predefined Pervasive Dashboards](#).

- **General** tab:
  - Business Partner Profile
  - *Total Sales Amount (LTD)* (KPI)
  - *Gross Profit (LTD)* (KPI)
  - *Number of Open Service Calls* (KPI)
  - *Revenue Versus Gross Profit for Last 6 Years* (pervasive dashboard)
  - *Potential Amt of Open Opportunities* (KPI)
  - *Churn Probability* (KPI)
  - *Opportunity Win Rate (LTD)* (KPI)
  - *Weighted Amount of All Open Opportunities (LC)* (KPI)
- **Sales** tab:
  - Business Partner Profile
  - *Total Sales Amount (YTD)* (KPI)
  - *Gross Profit (YTD)* (KPI)
  - *Gross Profit Margin (YTD)* (KPI)
  - *Revenue Versus Gross Profit for Last 6 Months* (pervasive dashboard)
  - *Top 5 Best Selling Items by Sales Amt of This Year* (pervasive dashboard)
  - *Number of Open Sales Quotations* (KPI)
  - *Number of Open Sales Orders* (KPI)
- **Order Fulfillment** tab:
  - Business Partner Profile
  - *On-Time Delivery Rate* (KPI)
  - *Average Fulfillment Days for a Sales Order* (KPI)
  - *Sales Return Amount for This Year* (KPI)
  - *Avg. Ord. Fulfillment Days by Cust. (Last 6 Mo.)* (pervasive dashboard)
  - *On-Time Delivery Rate by No. by Cust. (Last 6 Mo.)* (pervasive dashboard)
  - *Number of Open Deliveries* (KPI)
  - *Open Amount of Deliveries* (KPI)
- **Receivables** tab:
  - Business Partner Profile
  - *Credit Limit Deviation* (KPI)
  - *Total Receivable Amount (LTD)* (KPI)
  - *Receivables Overdue* (KPI)

- 
- *Aging of Receivables Overdue (30-Day Interval)* (pervasive dashboard)
- You cannot delete the predefined advanced dashboard, but you can modify it.

# 5 Working with Customer 360

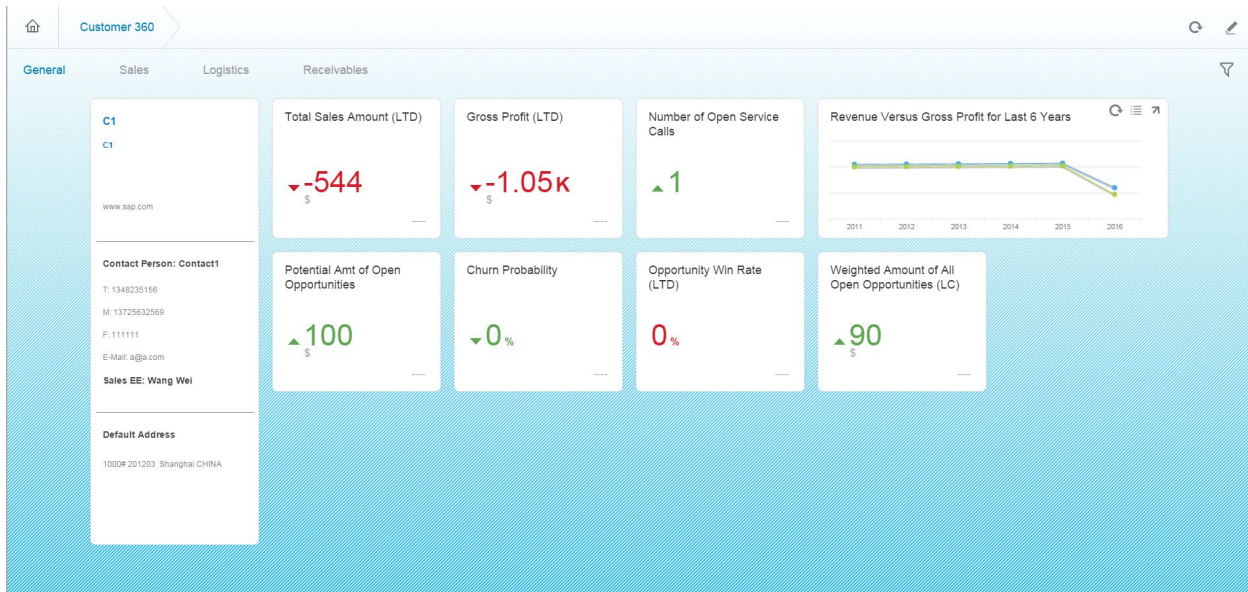

## Procedure

1. In the SAP Business One, version for SAP HANA *Main Menu*, choose *Business Partners* → *Business Partner Master Data*.
2. In the *Business Partner Master Data* window, navigate to a customer, and in the lower-right corner, choose *You Can Also* → *View Customer 360*.

The screenshot displays the 'Business Partner Master Data' window for customer 'C1'. The window is divided into several sections:

- Header Section:** Contains fields for Code (Manual, C1, Customer), Name (C1), Foreign Name, Group (Customers), Currency (US Dollar), and Federal Tax ID. It also shows summary statistics: Account Balance (-565.76), Deliveries (166.40), Orders (78.00), and Opportunities (1).
- Navigation Tabs:** General, Contact Persons, Addresses, Payment Terms, Payment Run, Accounting, Properties, Remarks, Attachments.
- General Tab:** Includes contact information (Tel 1, Tel 2, Mobile Phone, Fax, E-Mail, Web Site), shipping details (Shipping Type, Password), and business partner details (Factoring Indicator, BP Project, Industry, Business Partner Type: Company). It also features a 'Block Sending Marketing Content' checkbox and radio buttons for 'Active', 'Inactive', and 'Advanced' status.
- Right Panel:** Contains fields for Contact Person (Contact1), ID No. 2, Remarks, Sales Employee (Wang Wei), BP Channel Code, Technician, and Territory.
- Bottom Right:** A 'You Can Also' menu is open, listing various actions. The 'View Customer 360' option is highlighted with a red box.

The *Customer 360* advanced dashboard appears, displaying a 360-degree view of the customer. For more information about the advanced dashboard, see [Predefined Advanced Dashboards](#).
